Introduction

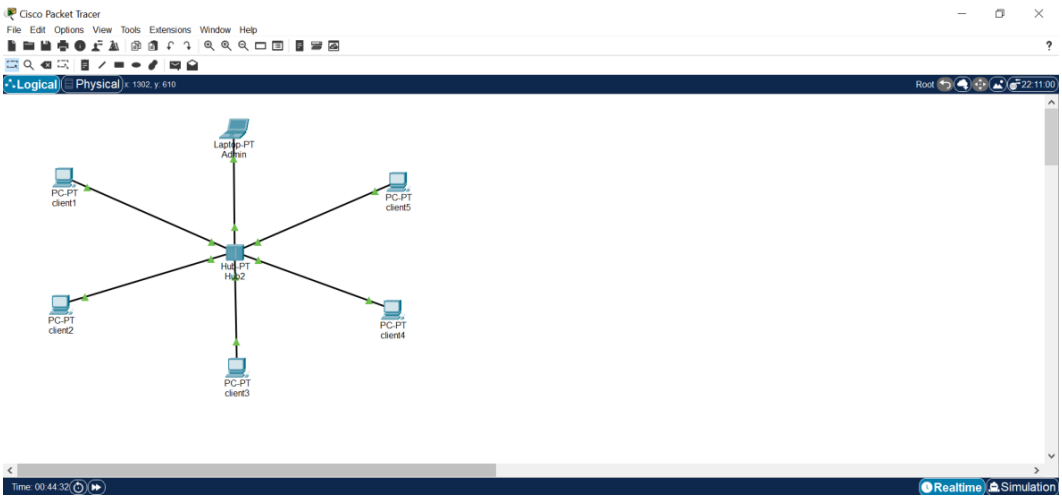

Dans le cadre du cours Réseaux I, ce troisième travail dirigé est consacré à la configuration de l'adressage IPv4 et IPv6 dans Cisco Packet Tracer. Il consiste à reproduire plusieurs topologies, à attribuer les adresses IP demandées aux équipements et à vérifier la communication entre les hôtes.

Objectifs du travail

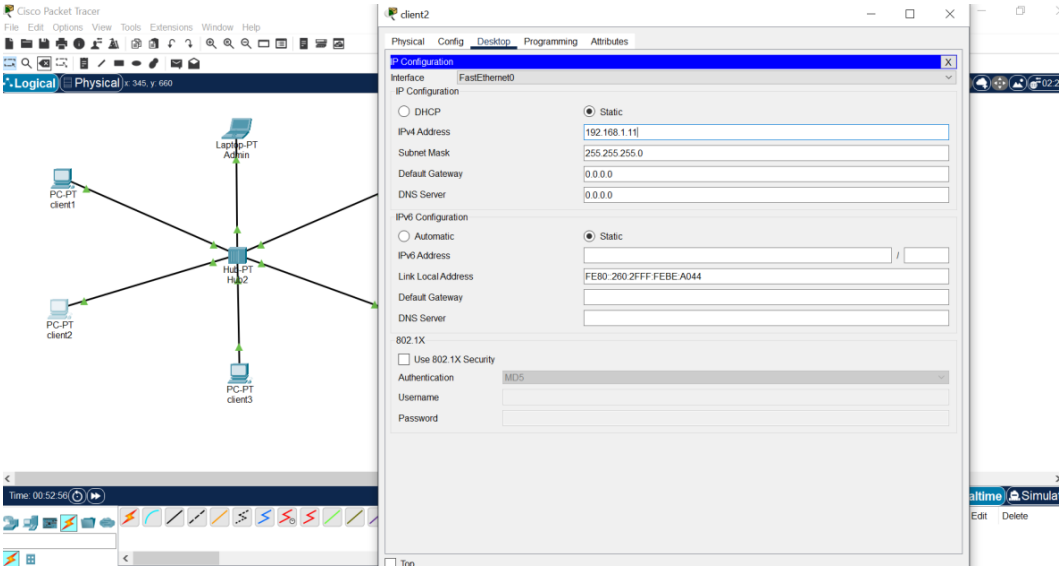

- Reproduire différentes topologies de réseau dans Cisco Packet Tracer.
- Raccorder correctement les équipements à l'aide de câbles adaptés.
- Configurer les adresses IPv4 et IPv6 selon les consignes fournies.
- Vérifier la connectivité à l'aide de la commande ping.

Tâche 1 — Première topologie IPv4

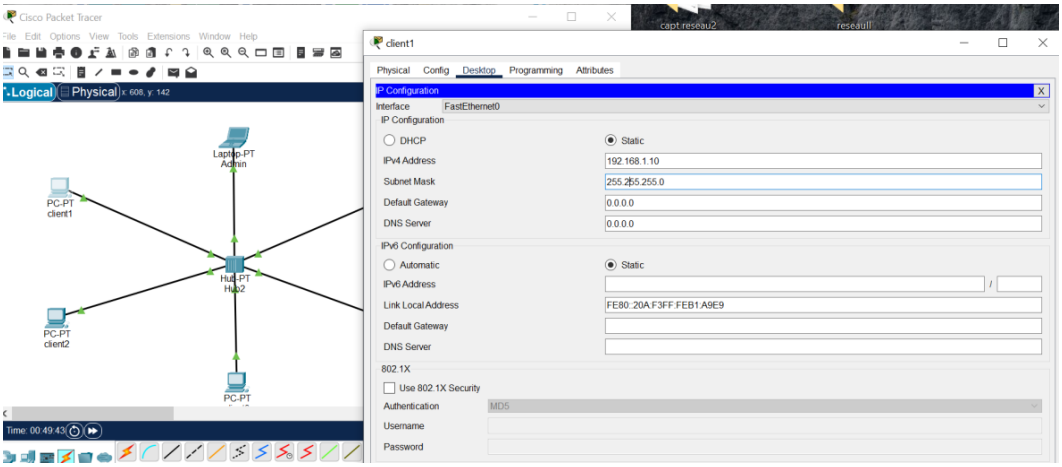

Reproduction de la première topologie, raccordement des équipements, attribution des adresses IPv4 et vérification de la connectivité.

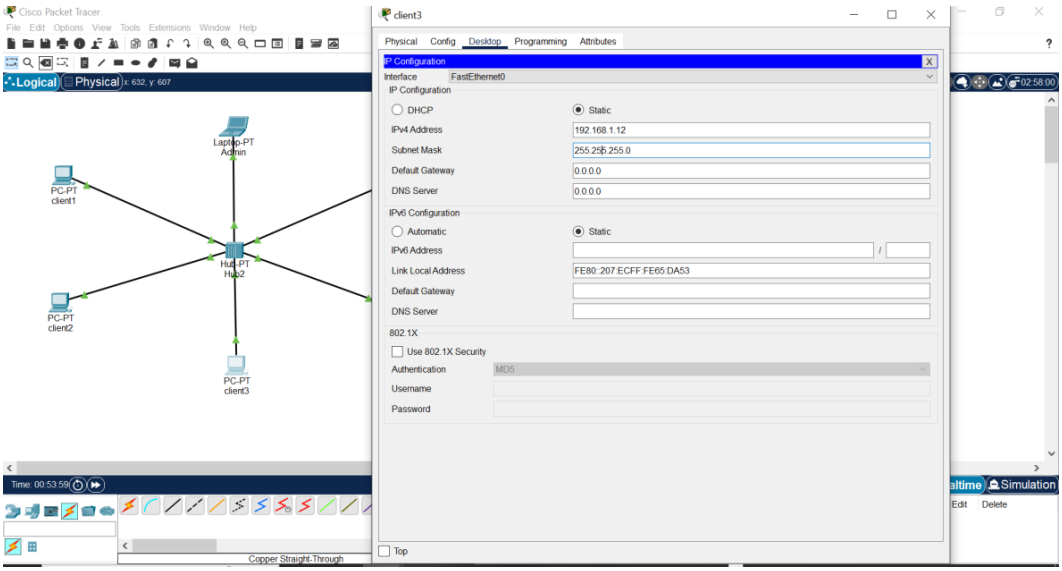

Capture 3.1 — Configuration ou vérification dans Cisco Packet Tracer

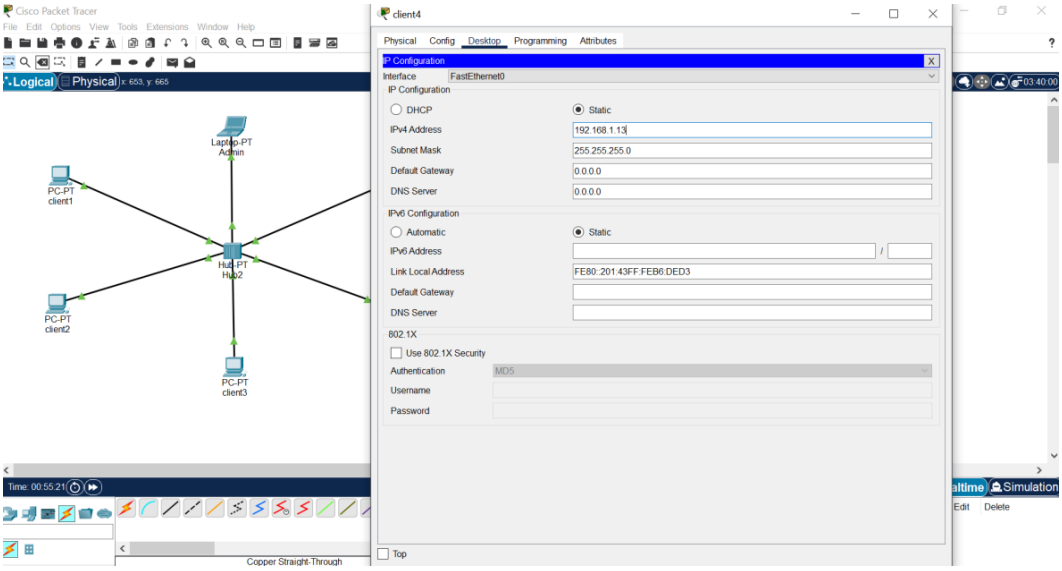

Capture 4.1 — Configuration ou vérification dans Cisco Packet Tracer

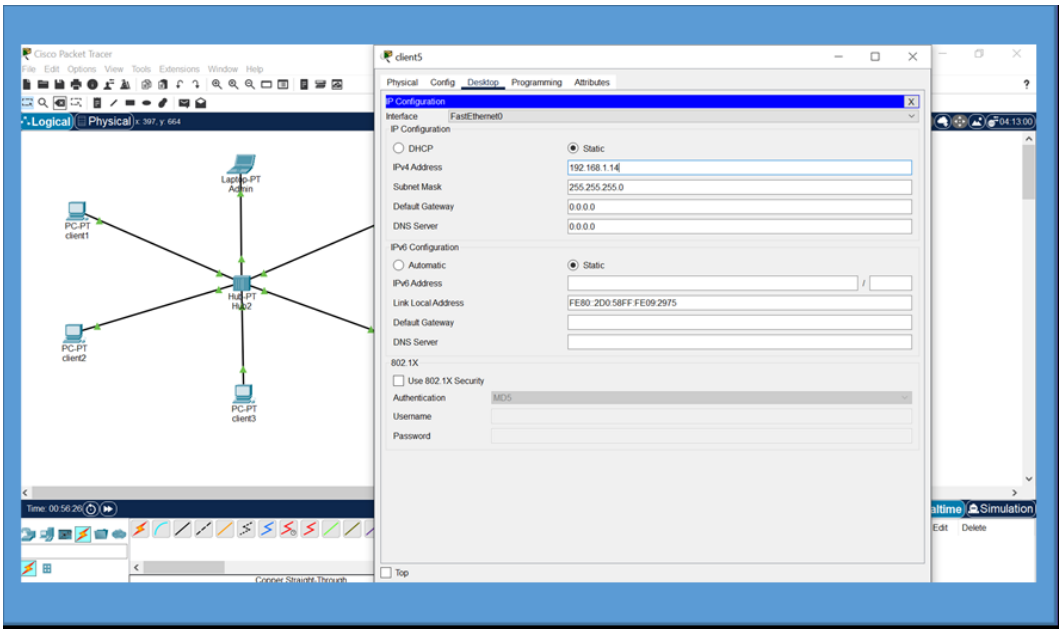

Capture 4.2 — Configuration ou vérification dans Cisco Packet Tracer

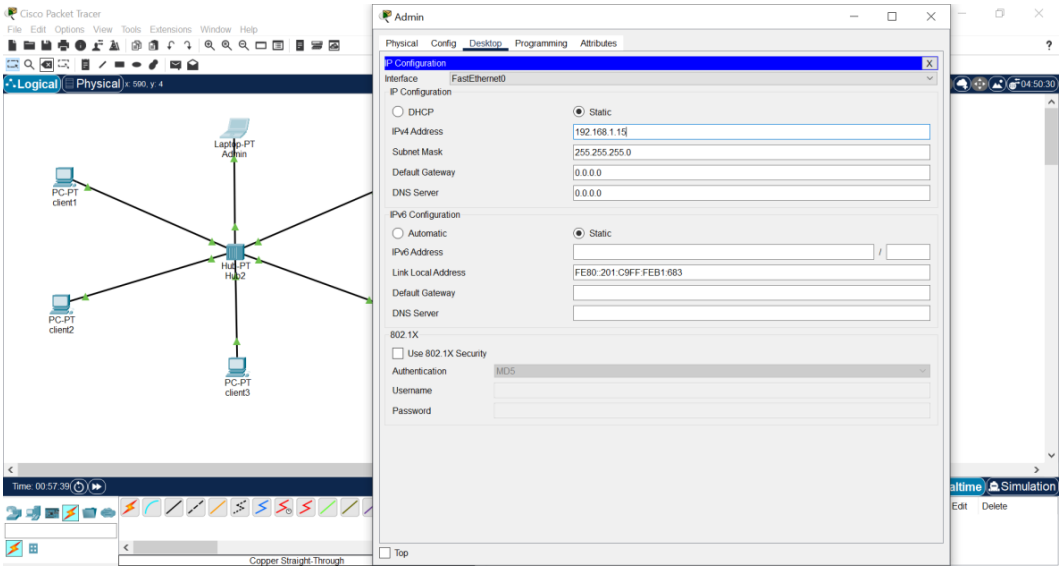

Capture 5.1 — Configuration ou vérification dans Cisco Packet Tracer

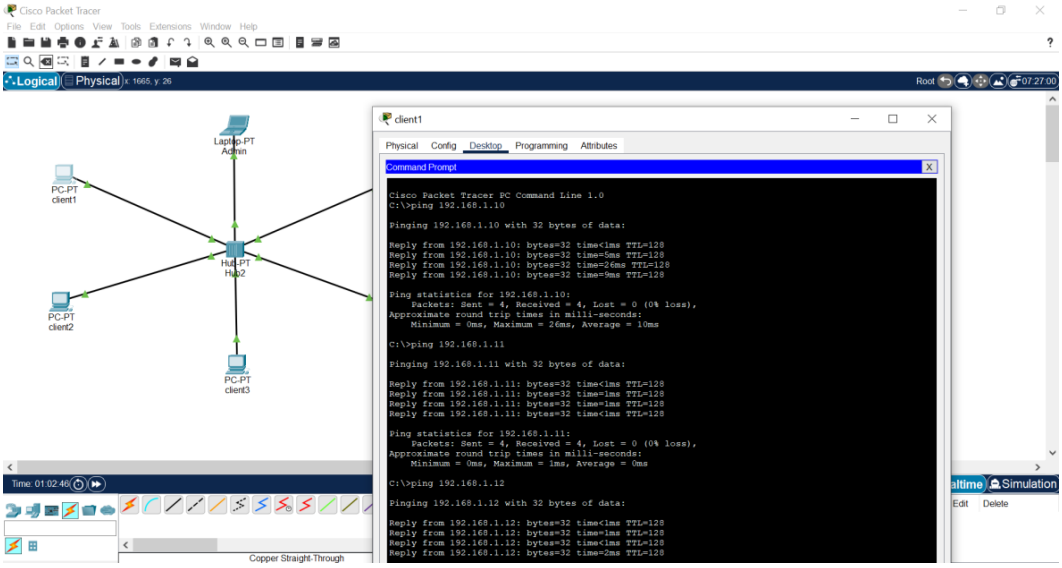

Capture 5.2 — Configuration ou vérification dans Cisco Packet Tracer

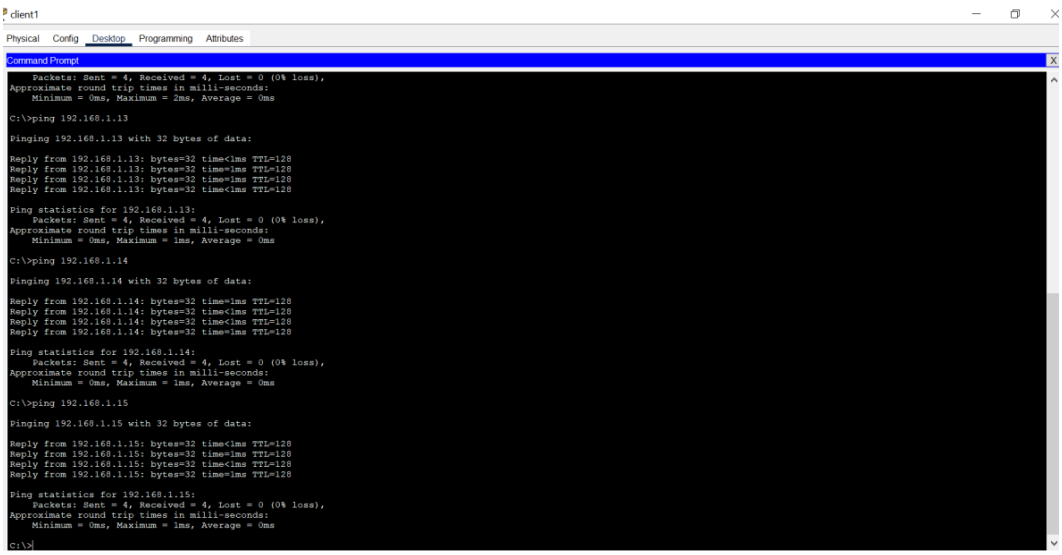

Capture 6.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 6.2 — Configuration ou vérification dans Cisco Packet Tracer

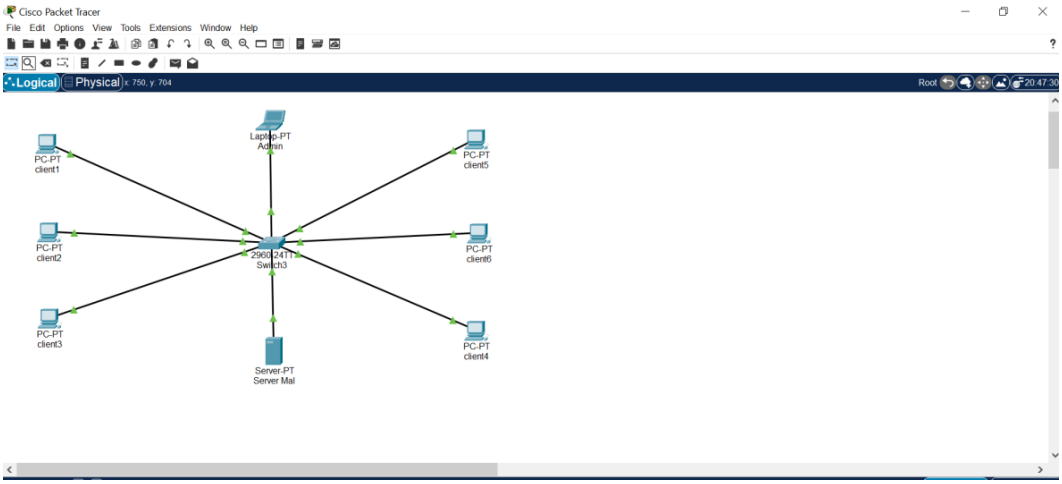

Capture 7.1 — Configuration ou vérification dans Cisco Packet Tracer

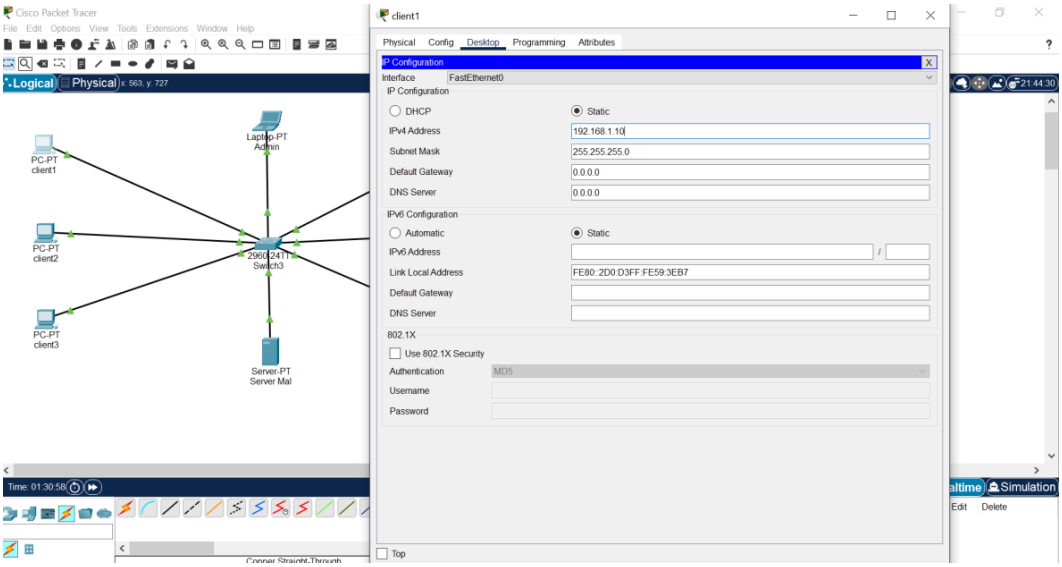

Capture 7.2 — Configuration ou vérification dans Cisco Packet Tracer

Tâche 2 — Deuxième topologie IPv4

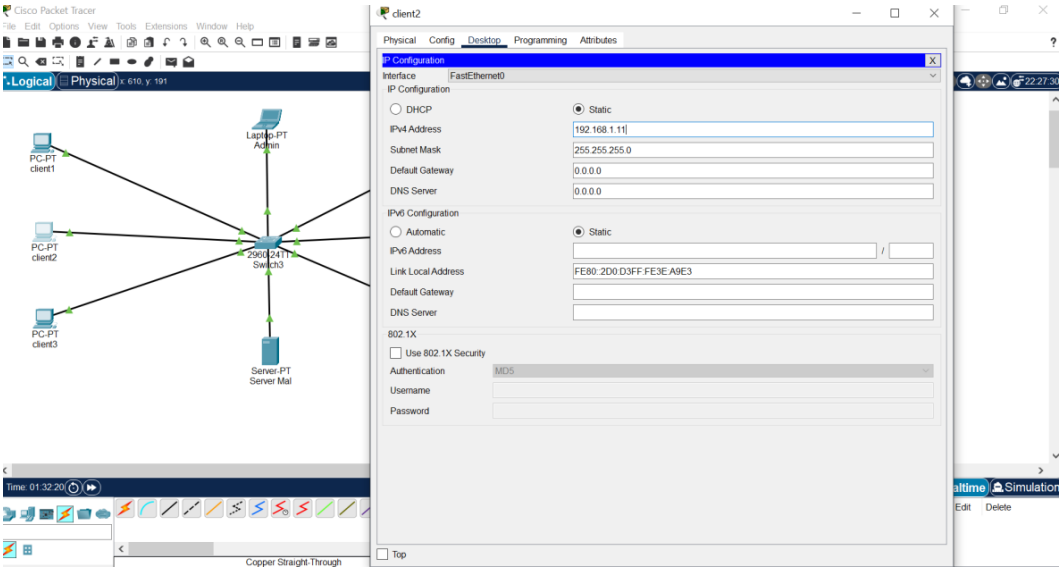

Reproduction de la deuxième topologie, configuration des adresses IPv4 conformément aux consignes et réalisation des tests de connectivité.

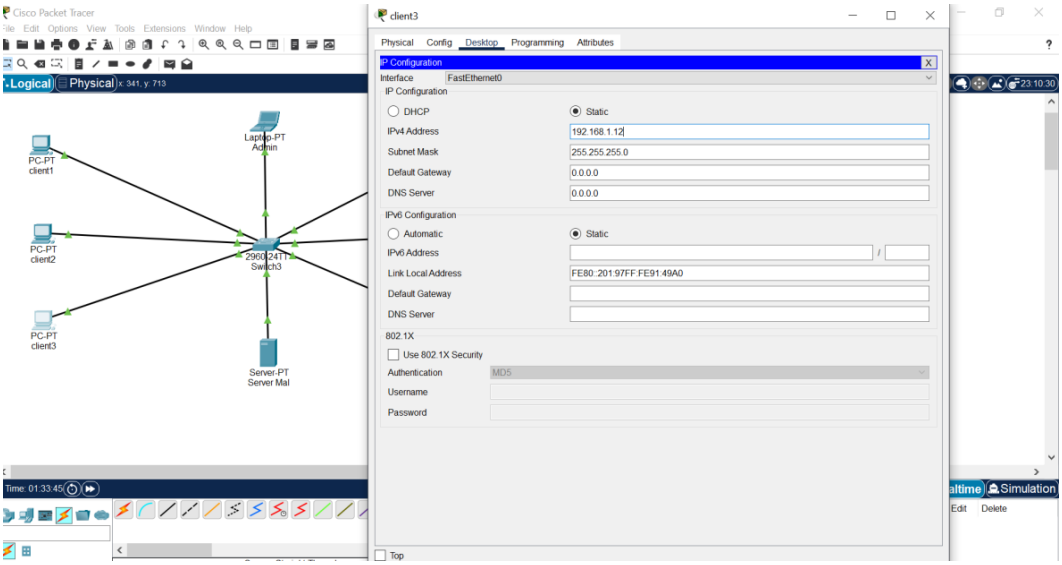

Capture 8.1 — Configuration ou vérification dans Cisco Packet Tracer

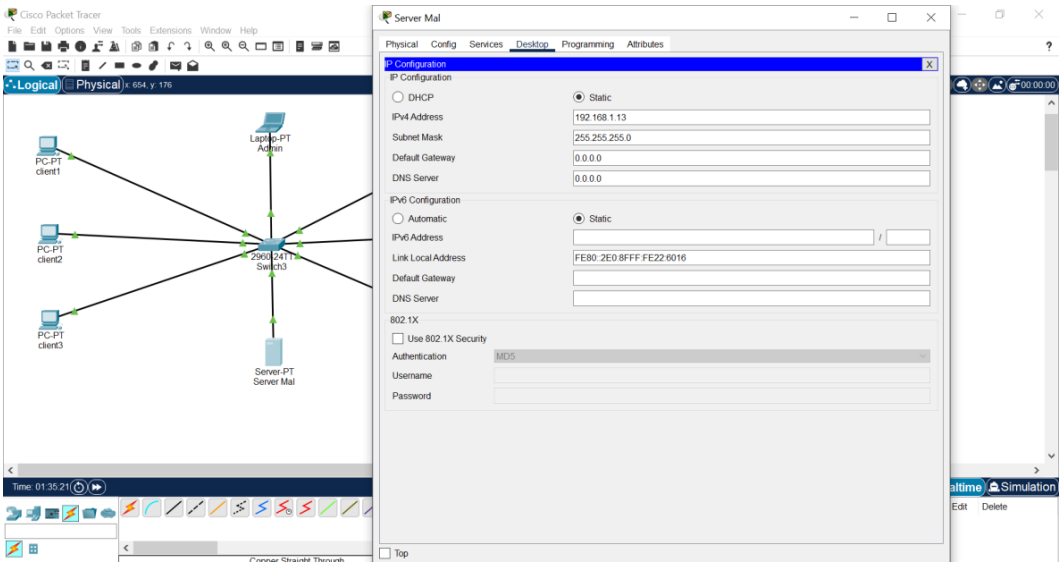

Capture 8.2 — Configuration ou vérification dans Cisco Packet Tracer

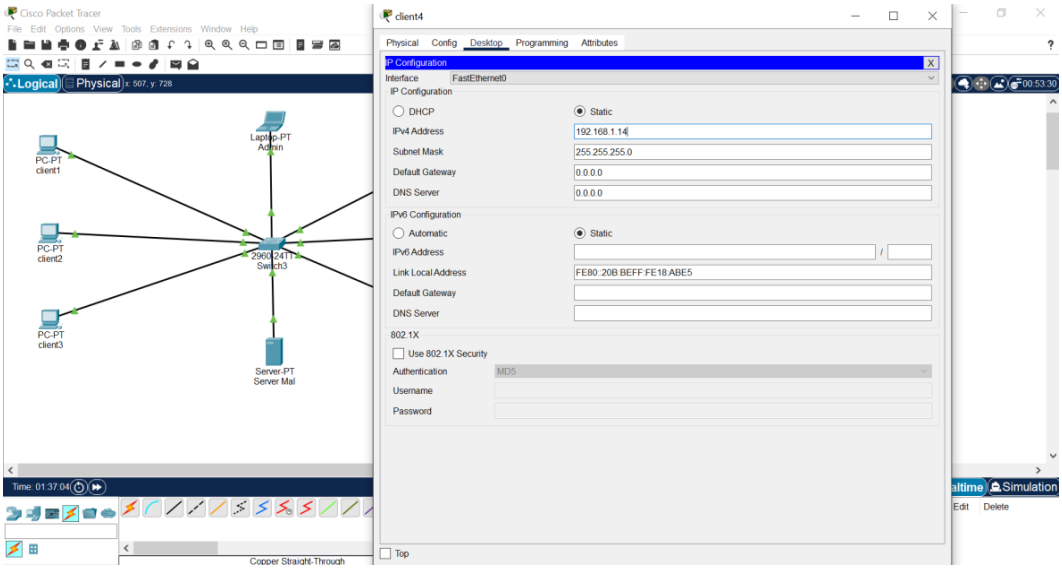

Capture 9.1 — Configuration ou vérification dans Cisco Packet Tracer

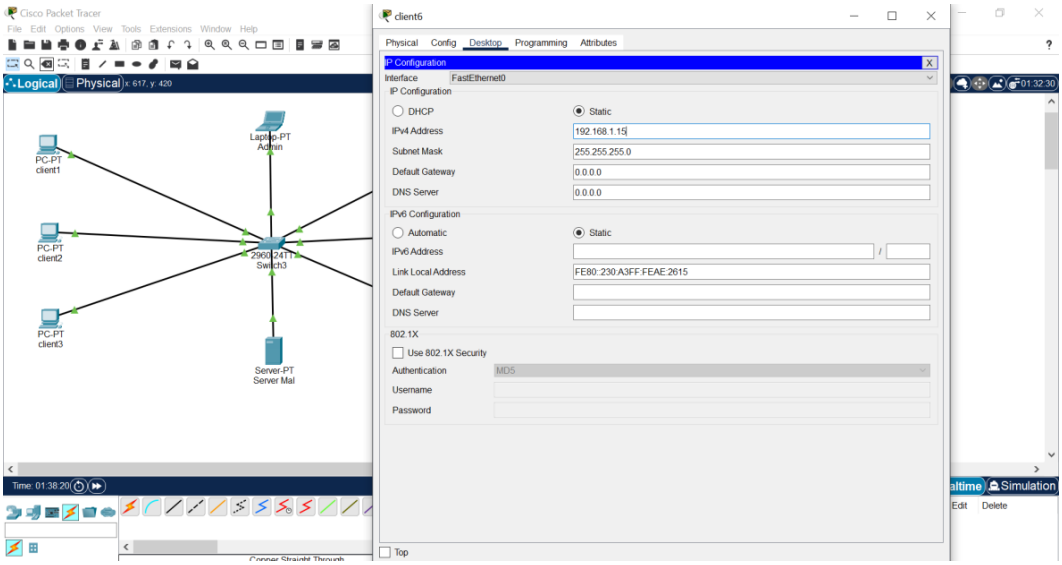

Capture 9.2 — Configuration ou vérification dans Cisco Packet Tracer

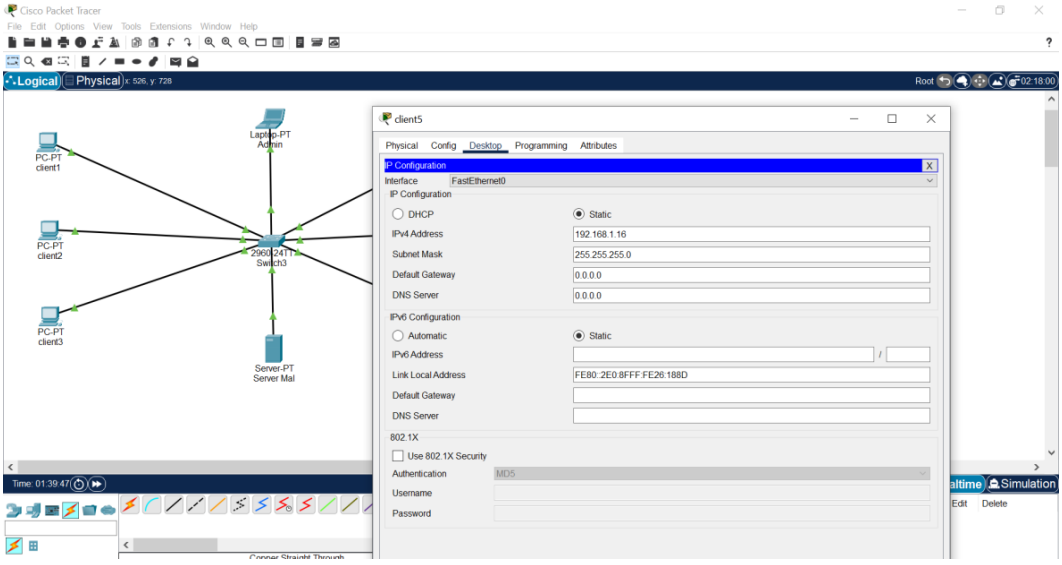

Capture 10.1 — Configuration ou vérification dans Cisco Packet Tracer

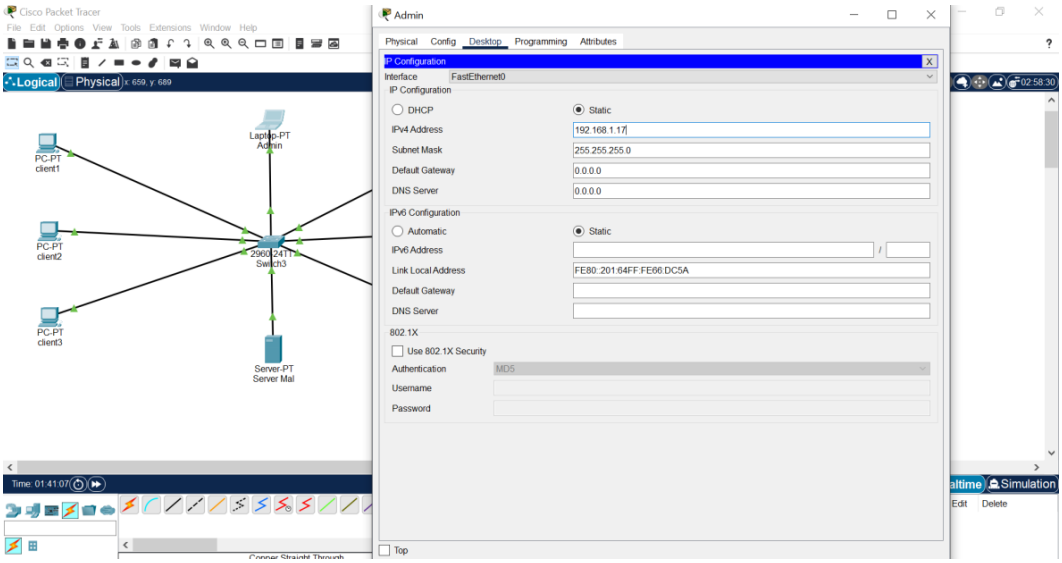

Capture 10.2 — Configuration ou vérification dans Cisco Packet Tracer

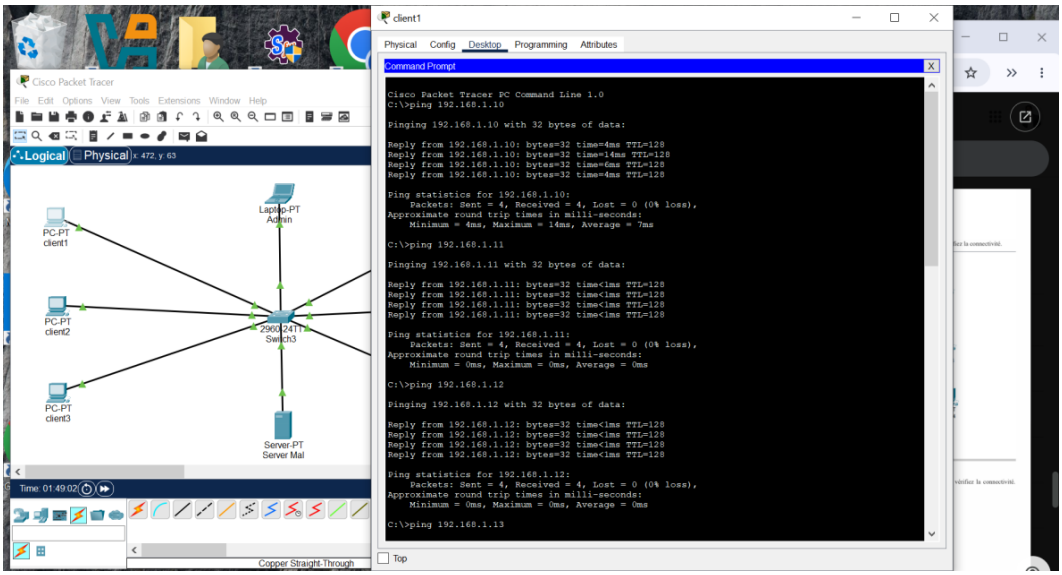

Capture 11.1 — Configuration ou vérification dans Cisco Packet Tracer

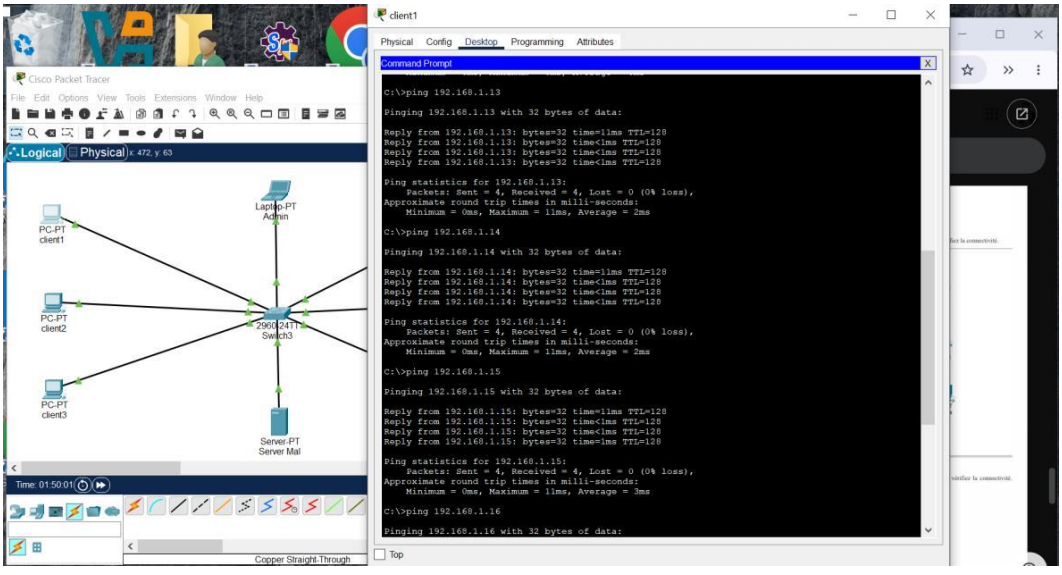

Capture 11.2 — Configuration ou vérification dans Cisco Packet Tracer

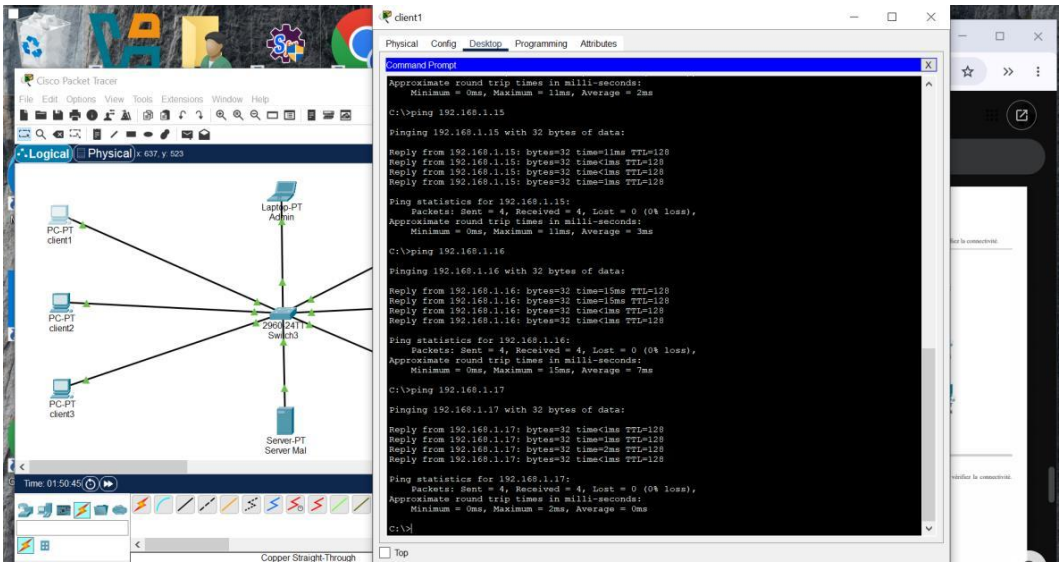

Capture 12.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 12.2 — Configuration ou vérification dans Cisco Packet Tracer

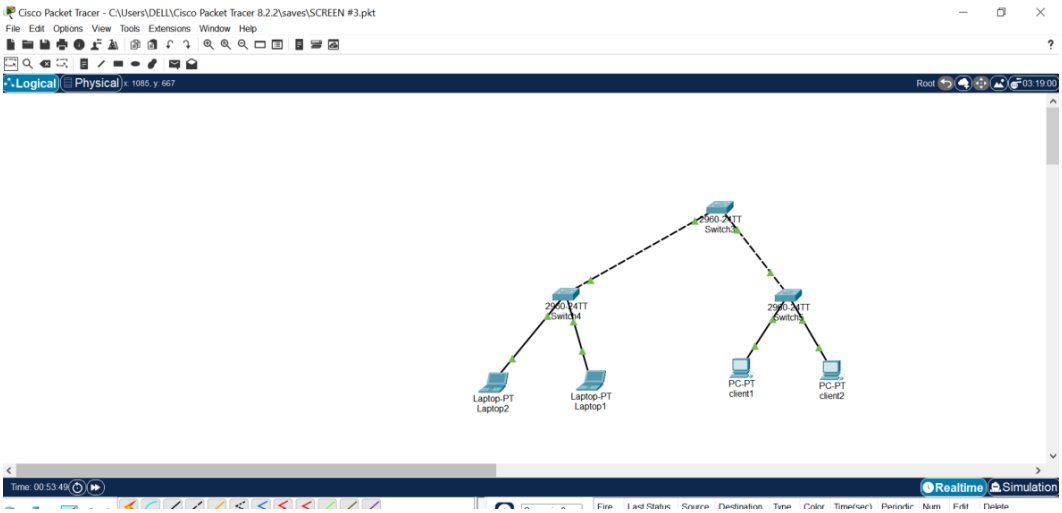

Capture 13.1 — Configuration ou vérification dans Cisco Packet Tracer

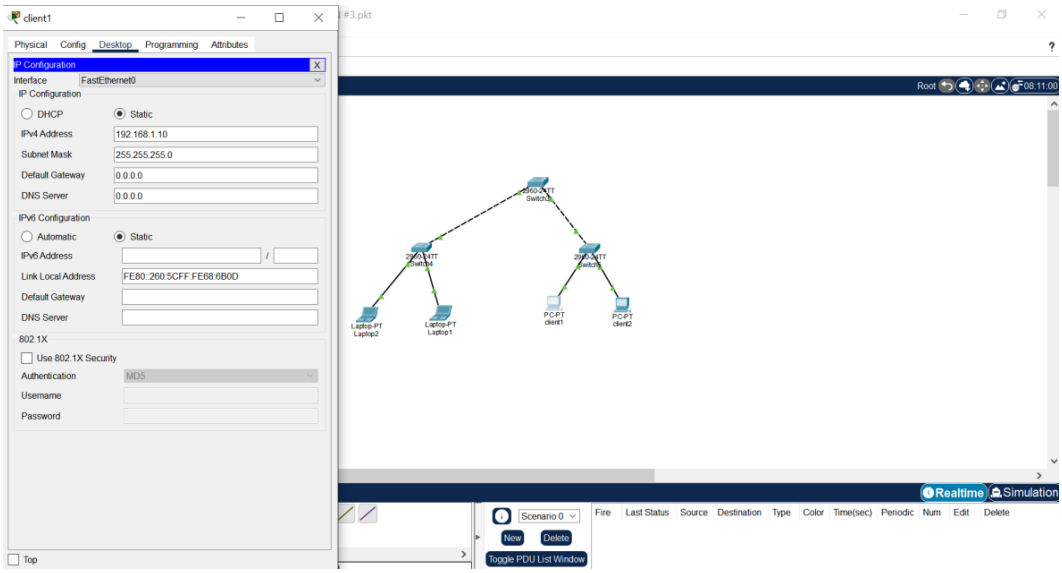

Capture 13.2 — Configuration ou vérification dans Cisco Packet Tracer

Tâche 3 — Topologie IPv4 au choix

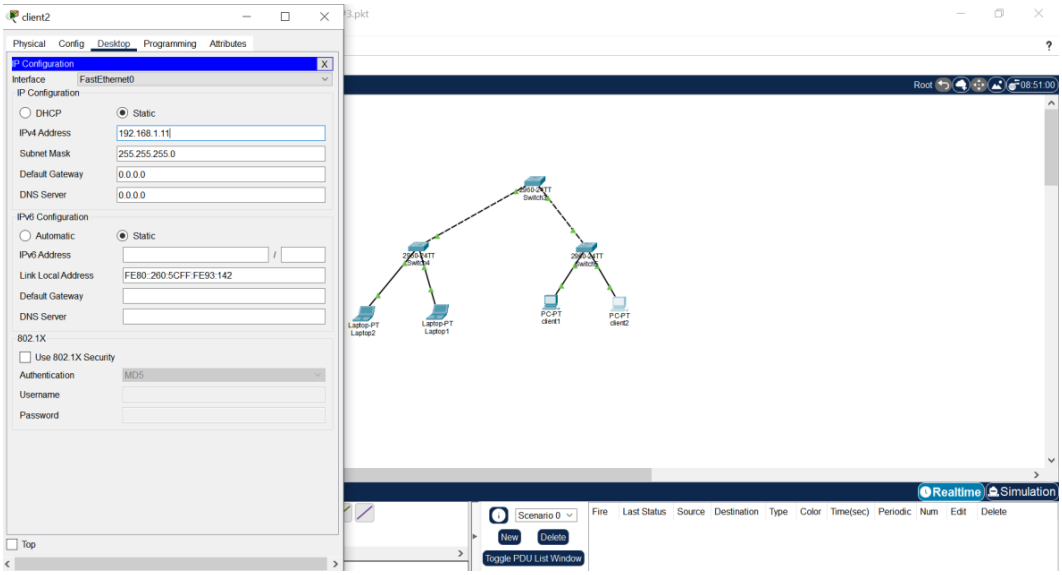

Choix et réalisation d'une topologie, configuration des postes et vérification de leur communication.

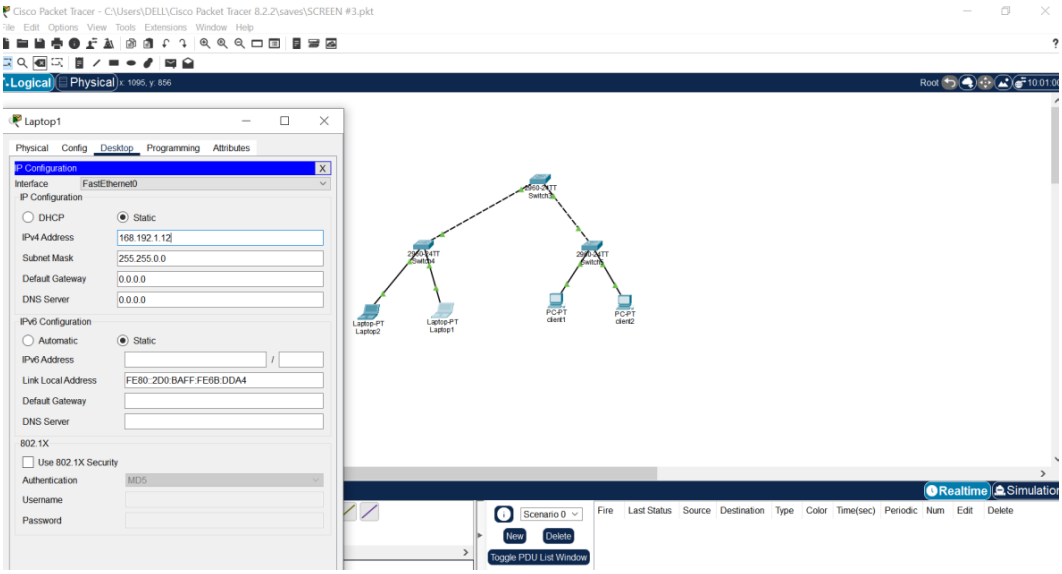

Capture 14.1 — Configuration ou vérification dans Cisco Packet Tracer

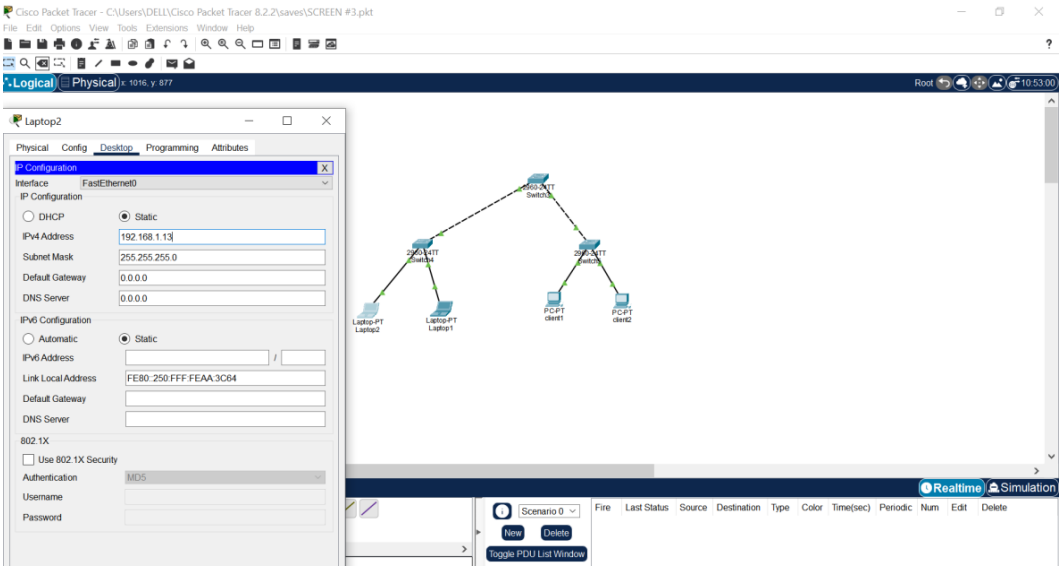

Capture 14.2 — Configuration ou vérification dans Cisco Packet Tracer

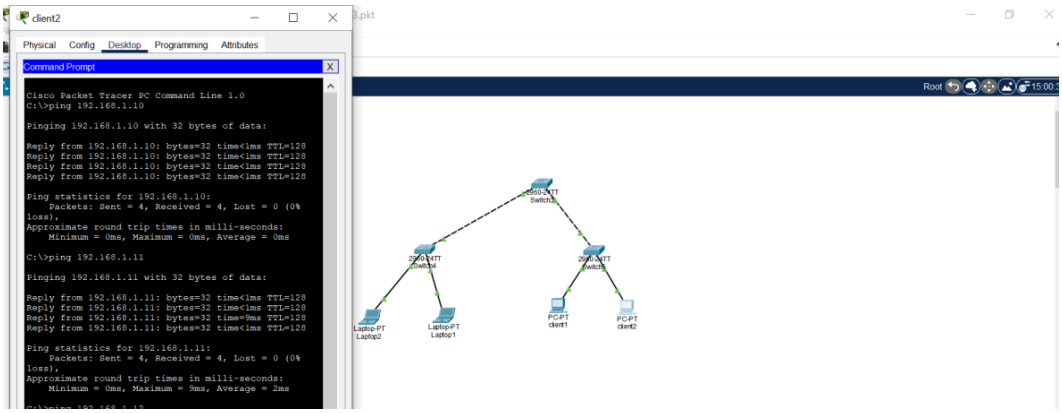

Capture 15.1 — Configuration ou vérification dans Cisco Packet Tracer

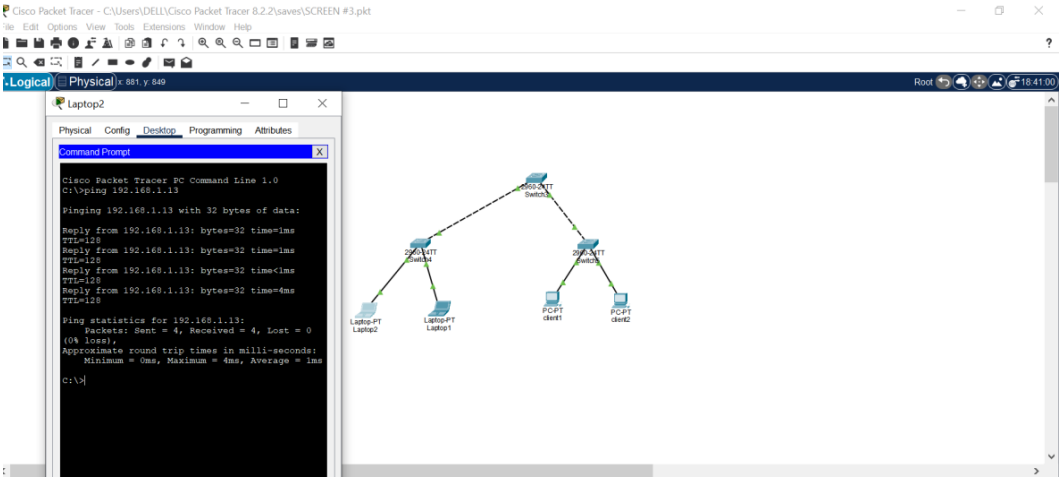

Capture 15.2 — Configuration ou vérification dans Cisco Packet Tracer

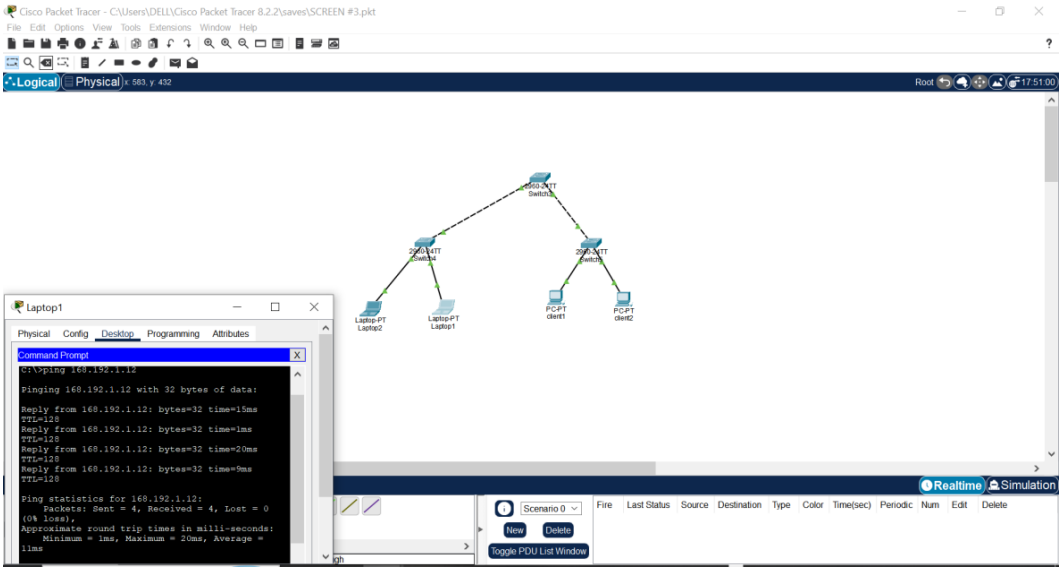

Capture 16.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 16.2 — Configuration ou vérification dans Cisco Packet Tracer

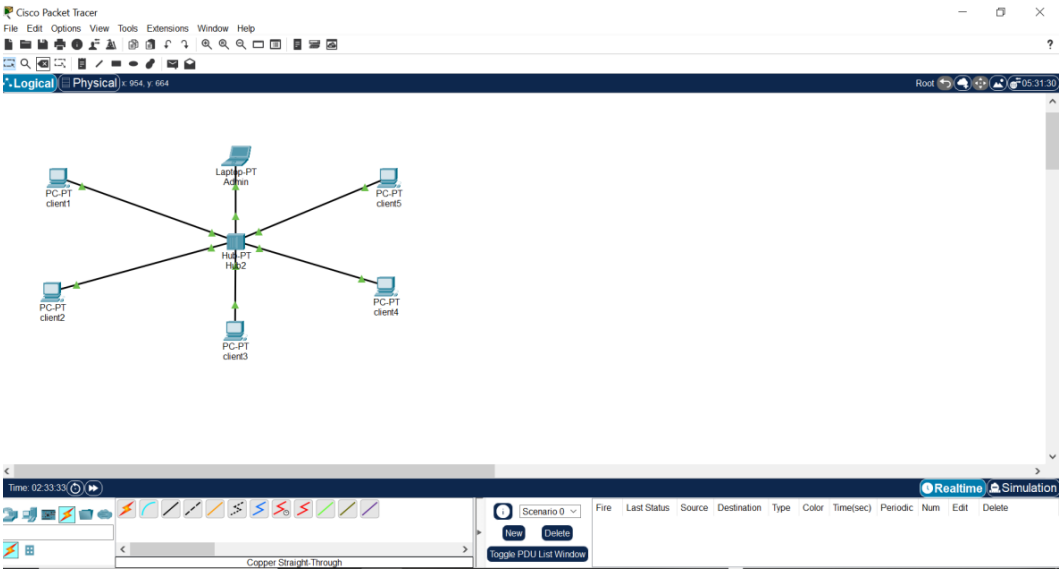

Capture 17.1 — Configuration ou vérification dans Cisco Packet Tracer

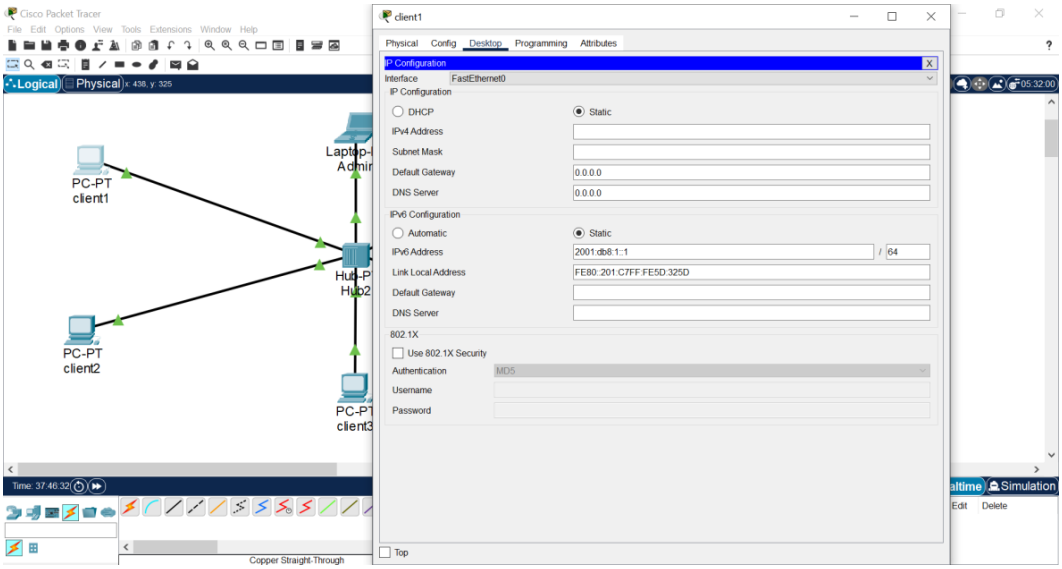

Capture 17.2 — Configuration ou vérification dans Cisco Packet Tracer

Tâche 4 — Première topologie IPv6

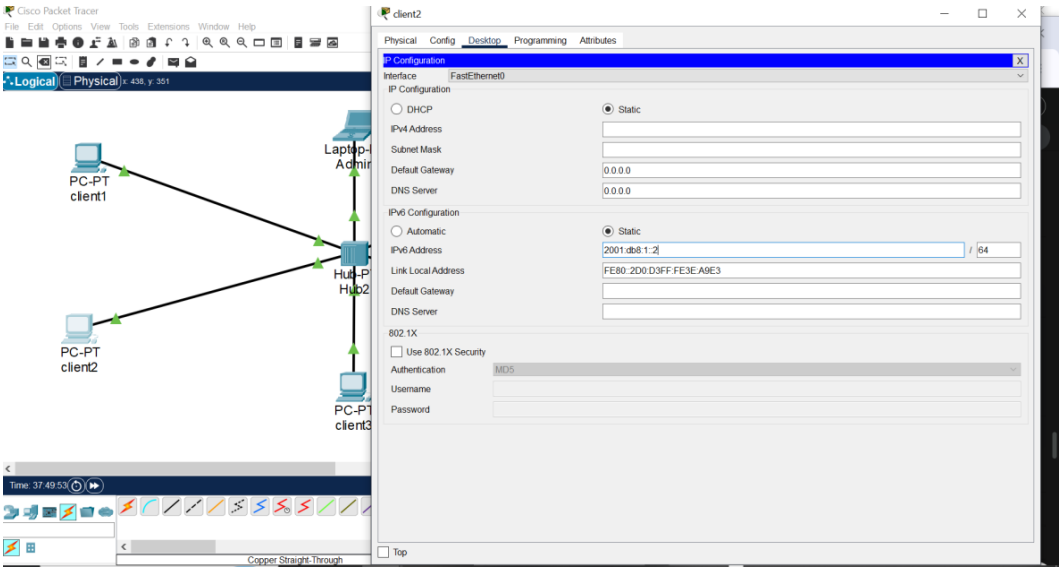

Reproduction de la topologie proposée, attribution des adresses IPv6 et réalisation de tests ping IPv6.

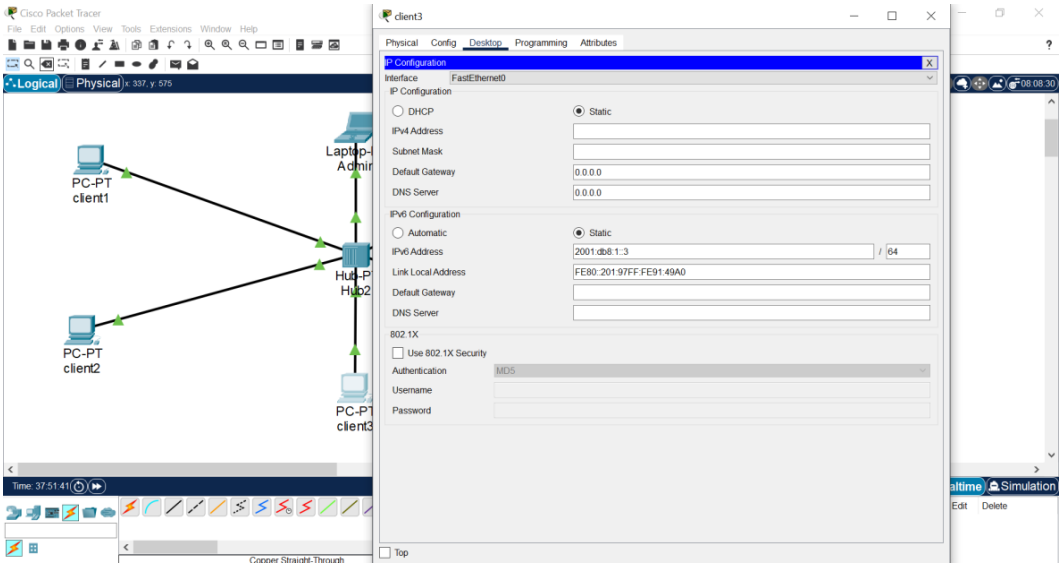

Capture 18.1 — Configuration ou vérification dans Cisco Packet Tracer

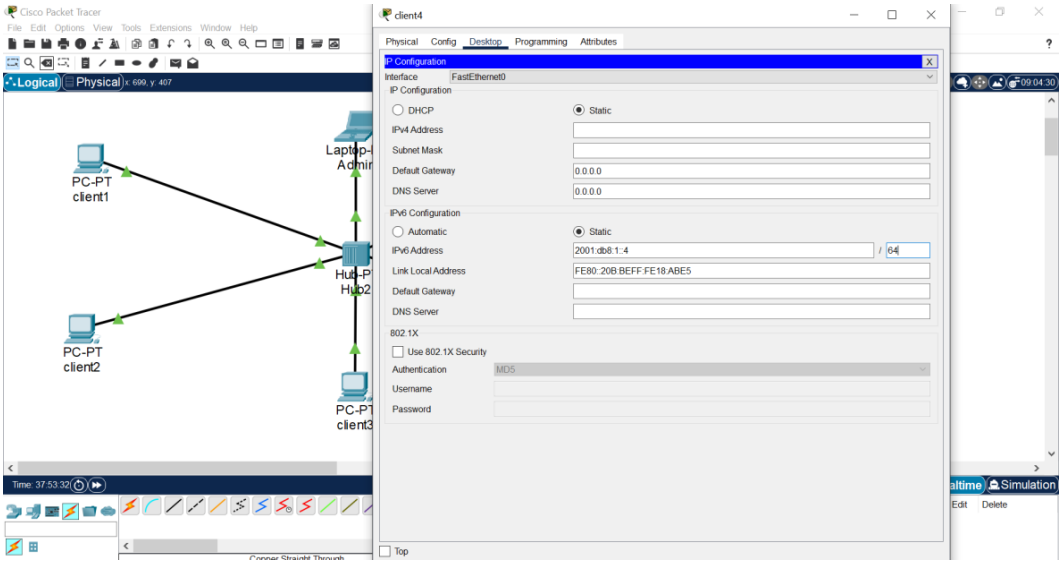

Capture 19.1 — Configuration ou vérification dans Cisco Packet Tracer

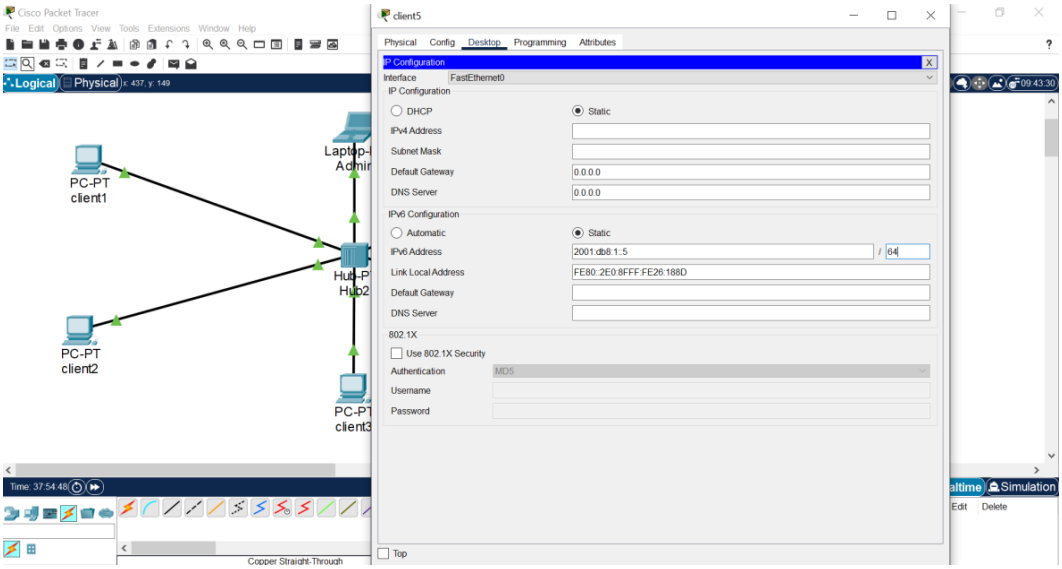

Capture 19.2 — Configuration ou vérification dans Cisco Packet Tracer

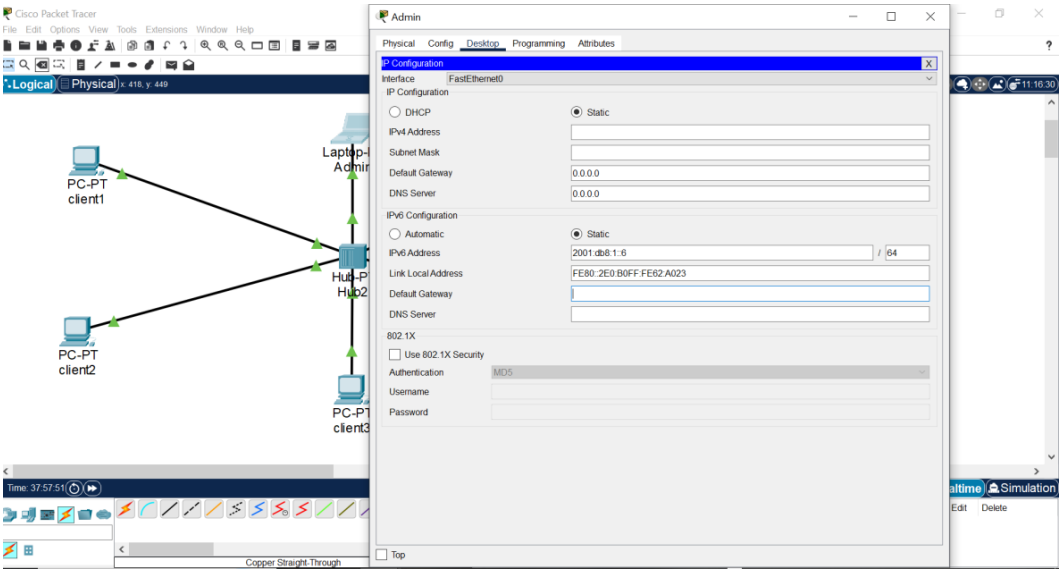

Capture 20.1 — Configuration ou vérification dans Cisco Packet Tracer

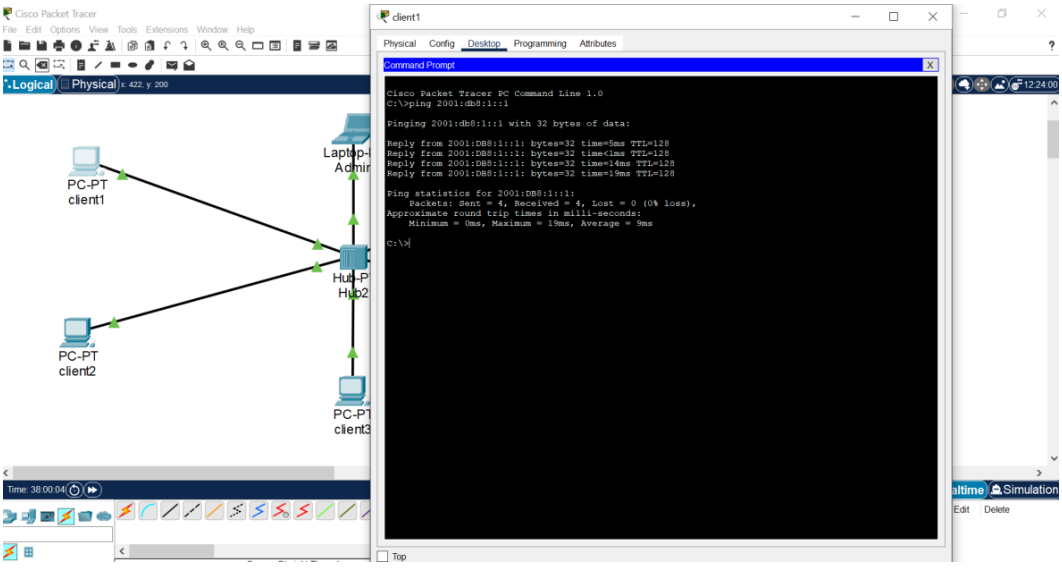

Capture 20.2 — Configuration ou vérification dans Cisco Packet Tracer

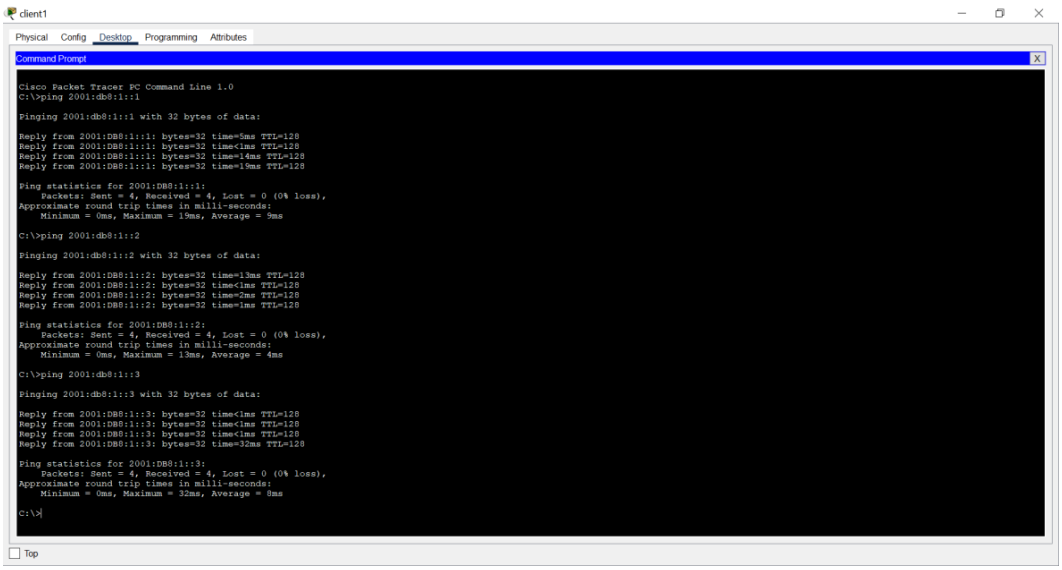

Capture 21.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 21.2 — Configuration ou vérification dans Cisco Packet Tracer

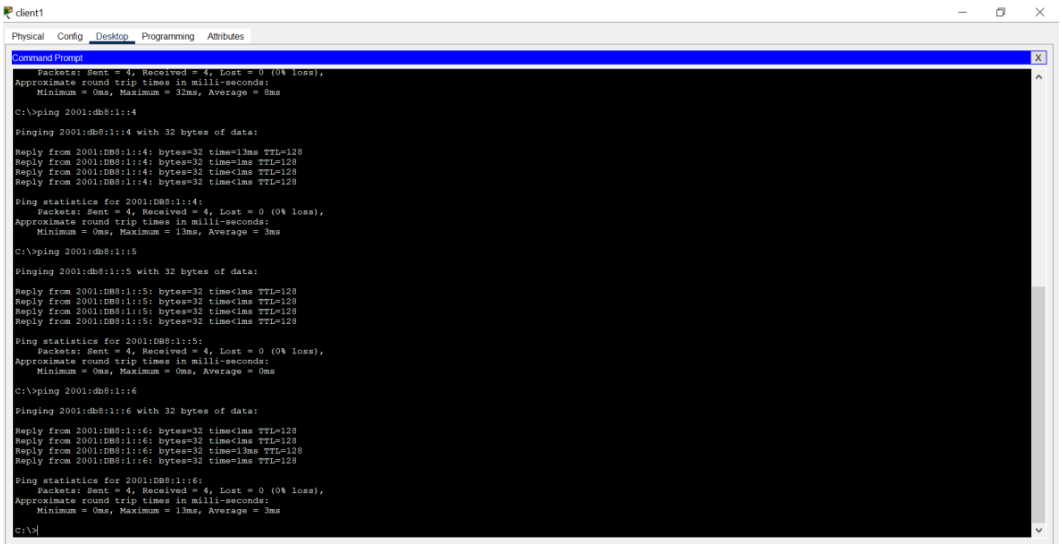

Capture 22.1 — Configuration ou vérification dans Cisco Packet Tracer

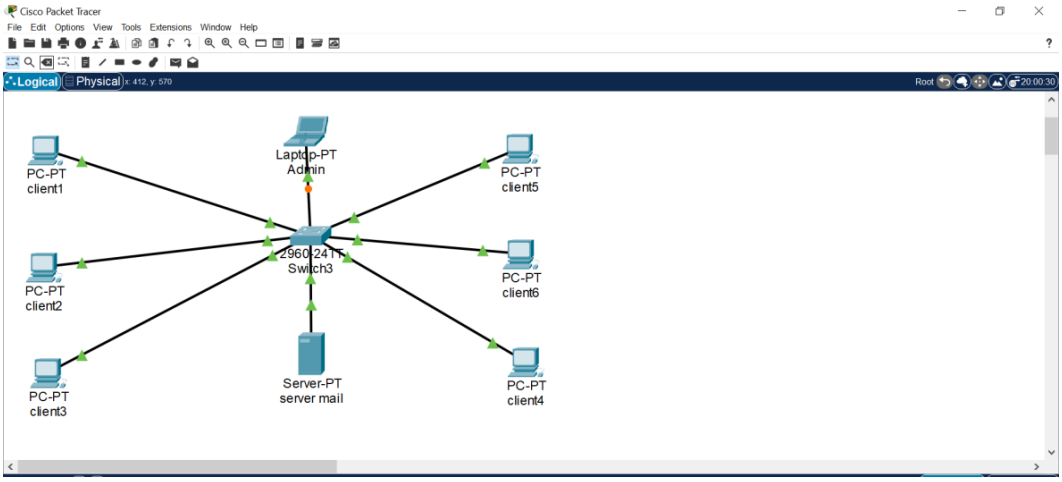

Capture 22.2 — Configuration ou vérification dans Cisco Packet Tracer

Tâche 5 — Deuxième topologie IPv6

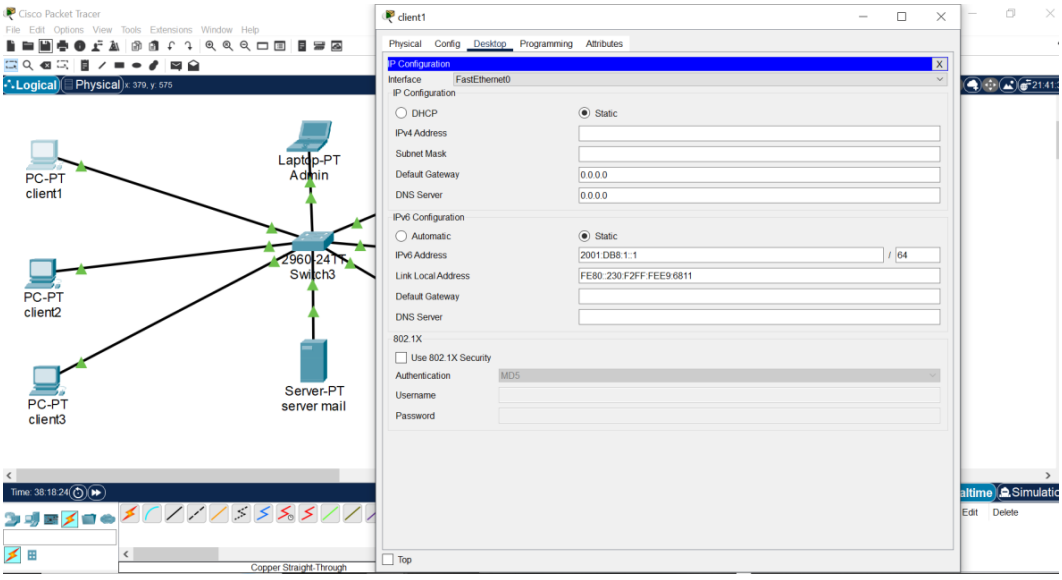

Création de la deuxième topologie IPv6, configuration des différents équipements et vérification de la connectivité.

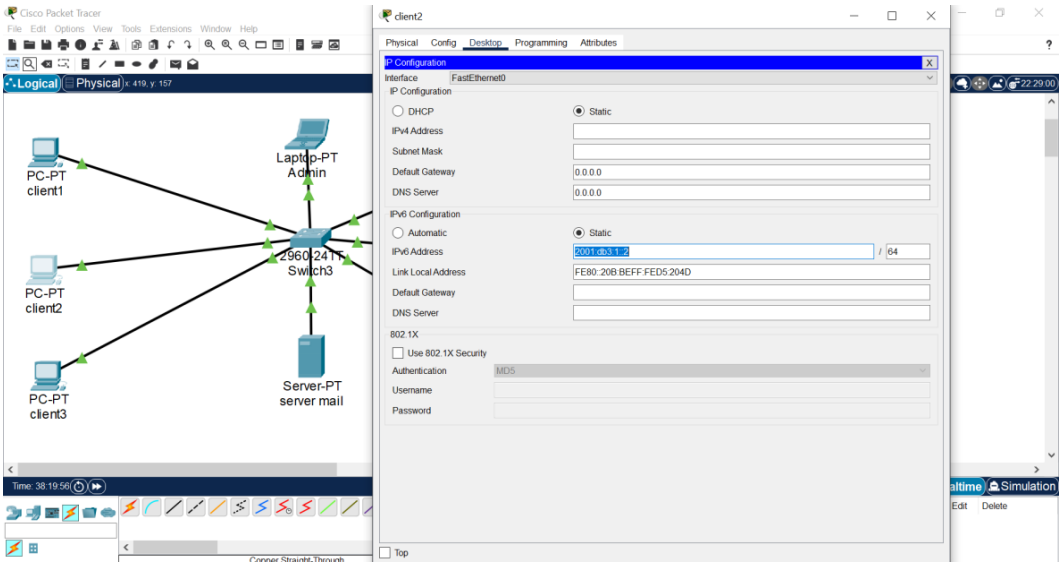

Capture 23.1 — Configuration ou vérification dans Cisco Packet Tracer

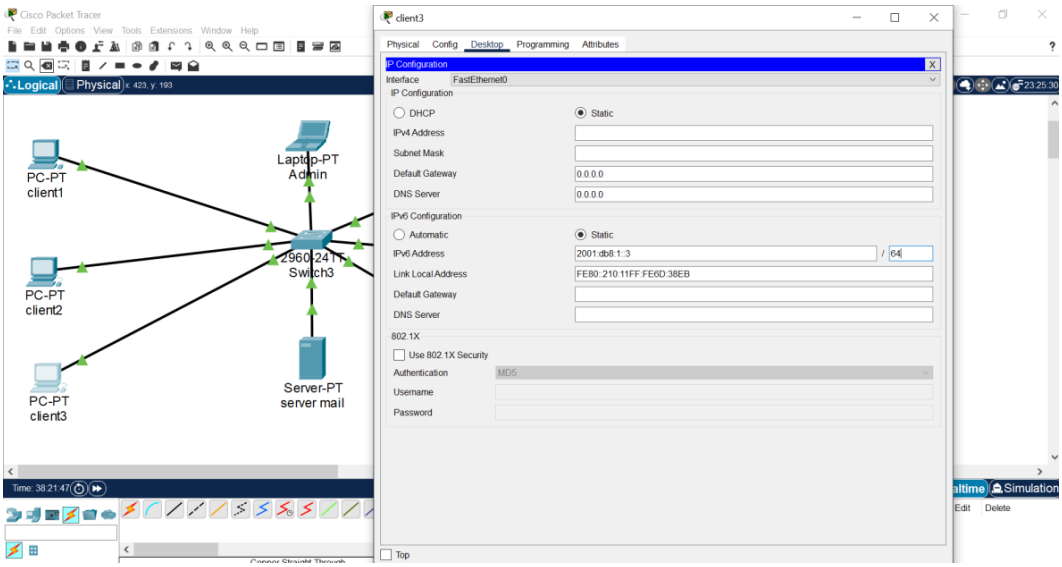

Capture 23.2 — Configuration ou vérification dans Cisco Packet Tracer

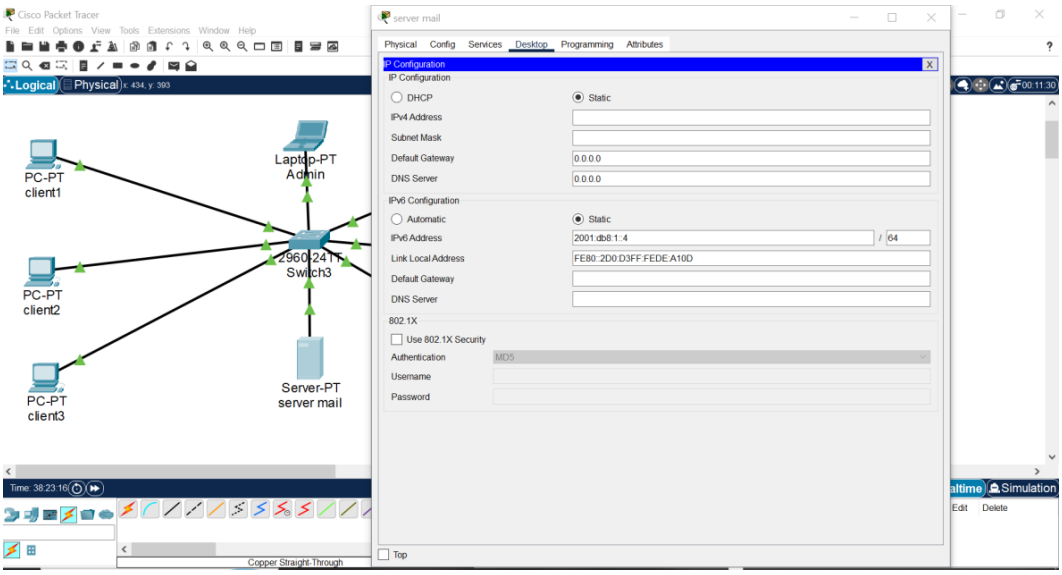

Capture 24.1 — Configuration ou vérification dans Cisco Packet Tracer

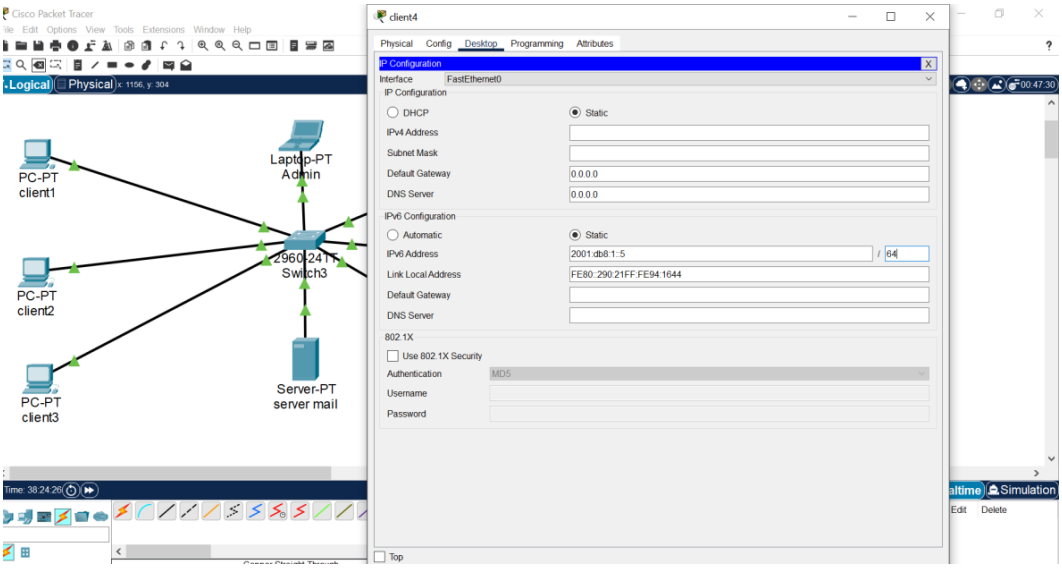

Capture 24.2 — Configuration ou vérification dans Cisco Packet Tracer

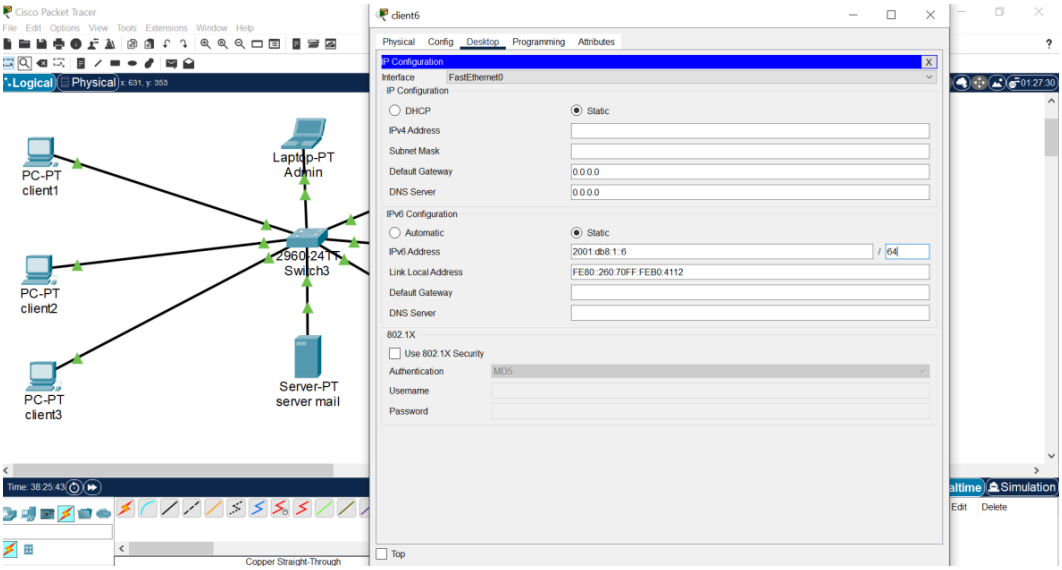

Capture 25.1 — Configuration ou vérification dans Cisco Packet Tracer

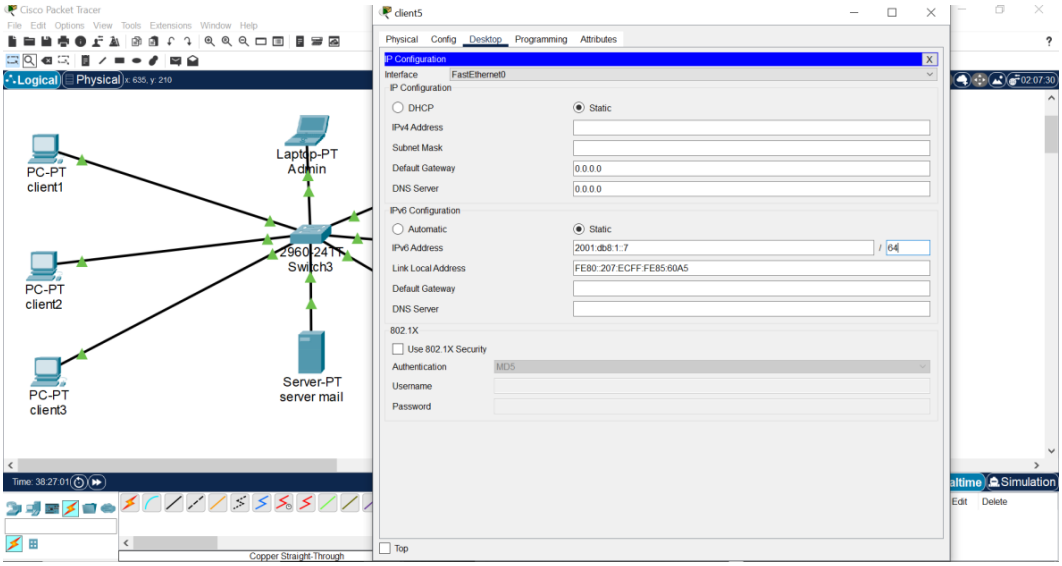

Capture 25.2 — Configuration ou vérification dans Cisco Packet Tracer

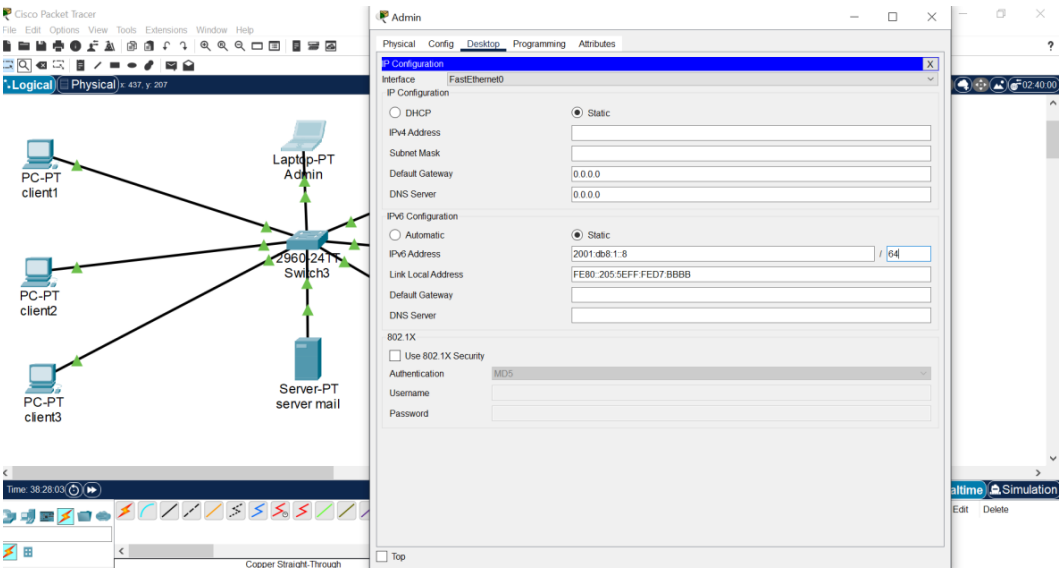

Capture 26.1 — Configuration ou vérification dans Cisco Packet Tracer

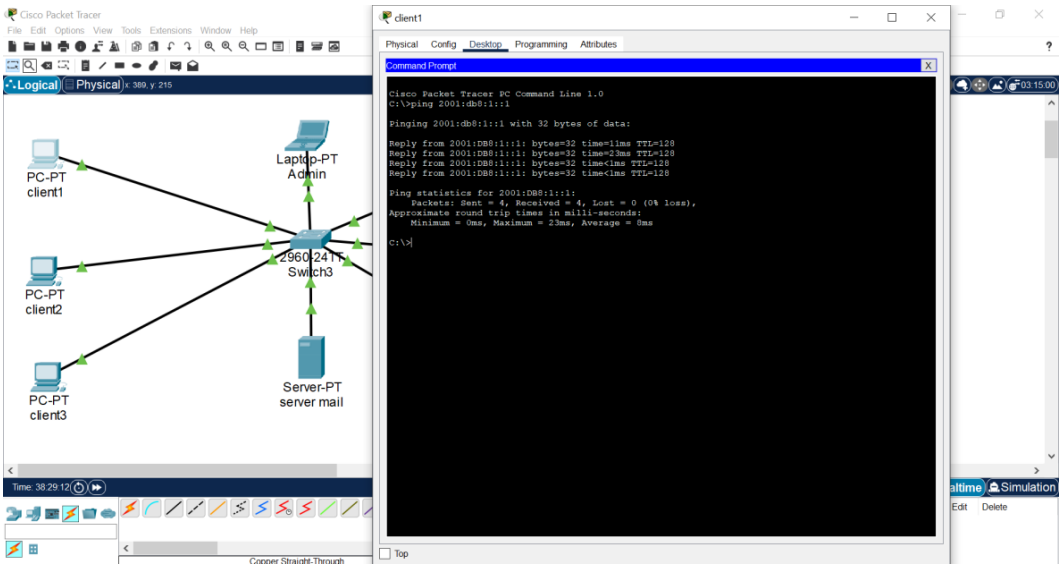

Capture 26.2 — Configuration ou vérification dans Cisco Packet Tracer

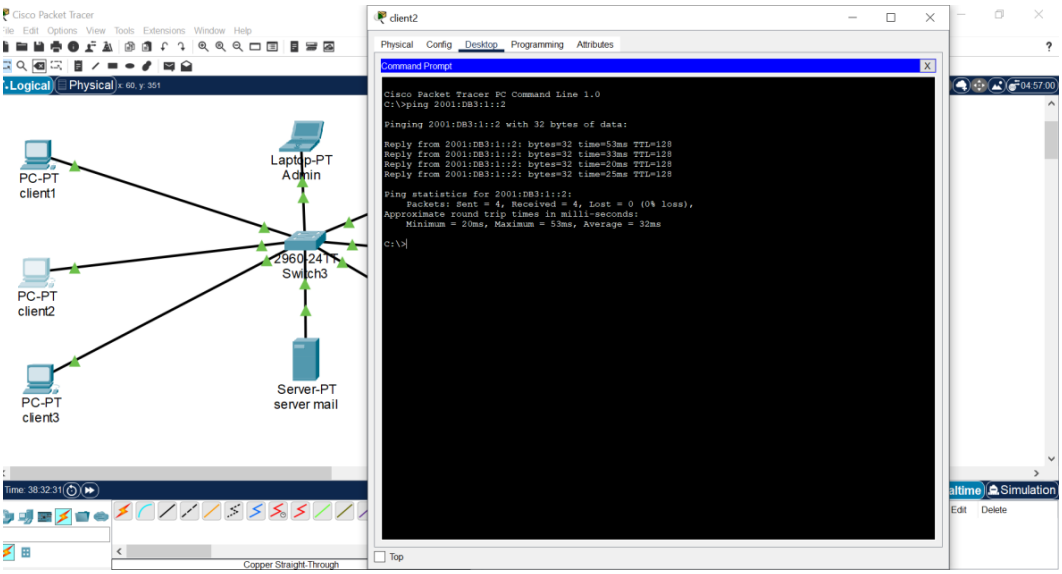

Capture 27.1 — Configuration ou vérification dans Cisco Packet Tracer

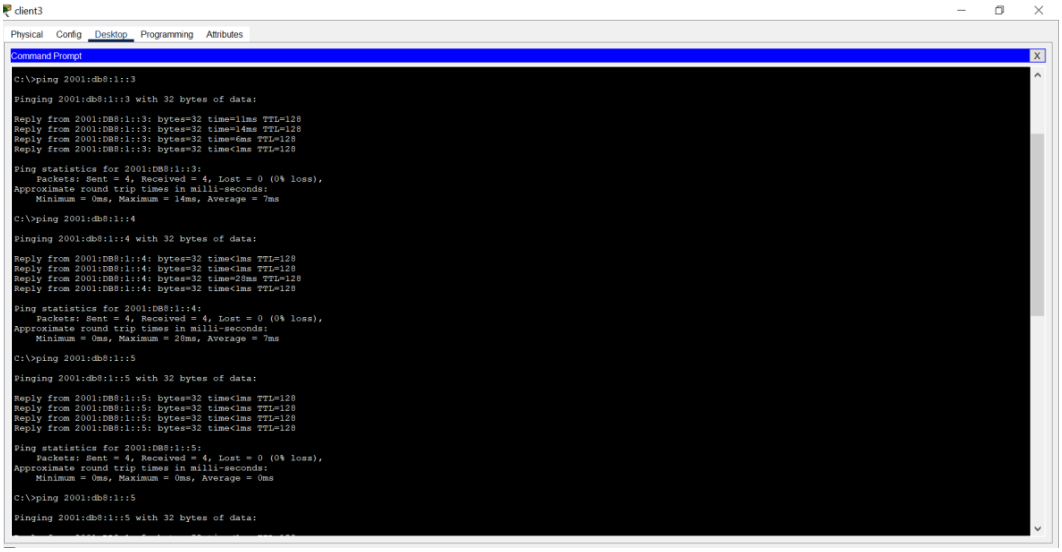

Capture 27.2 — Configuration ou vérification dans Cisco Packet Tracer

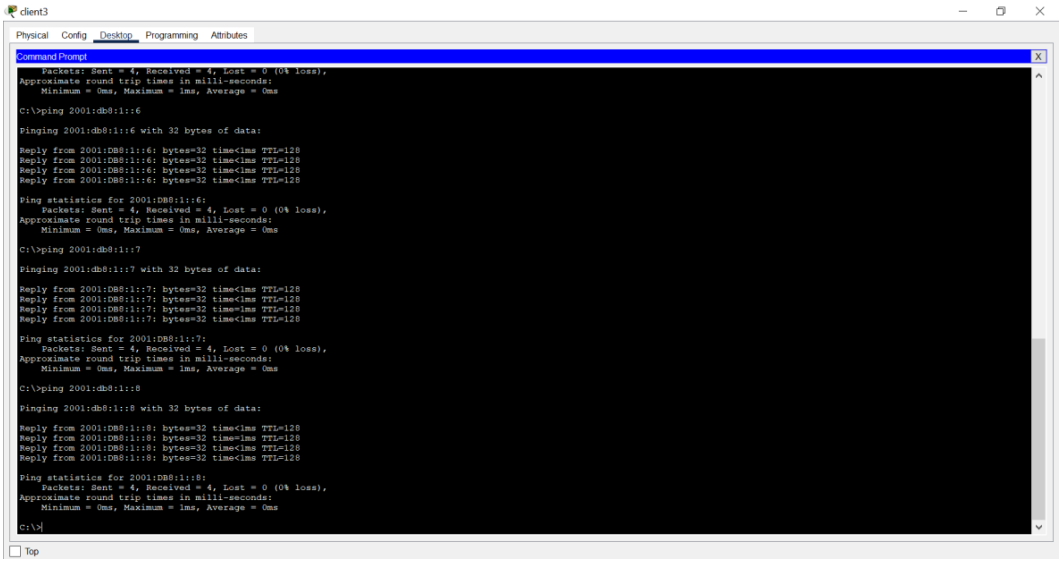

Capture 28.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 28.2 — Configuration ou vérification dans Cisco Packet Tracer

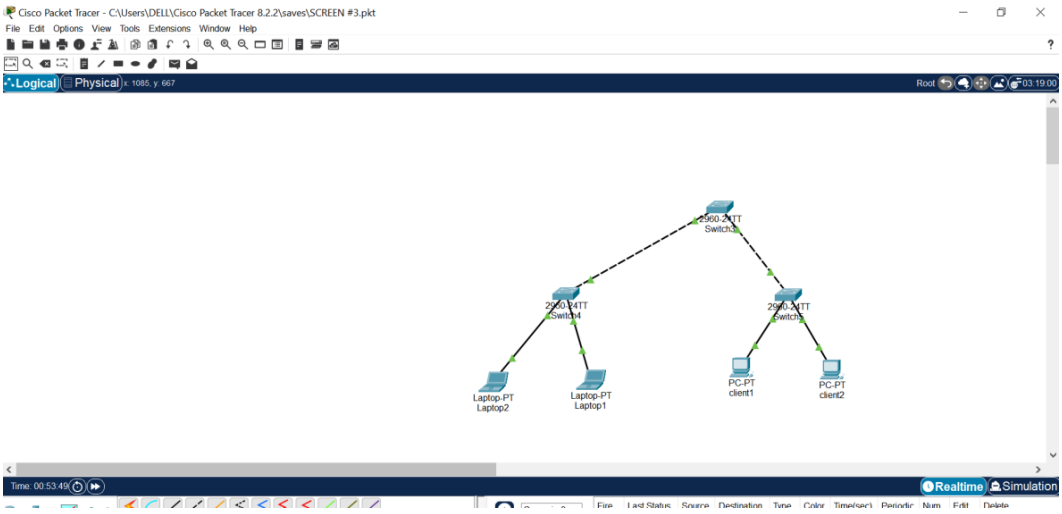

Capture 29.1 — Configuration ou vérification dans Cisco Packet Tracer

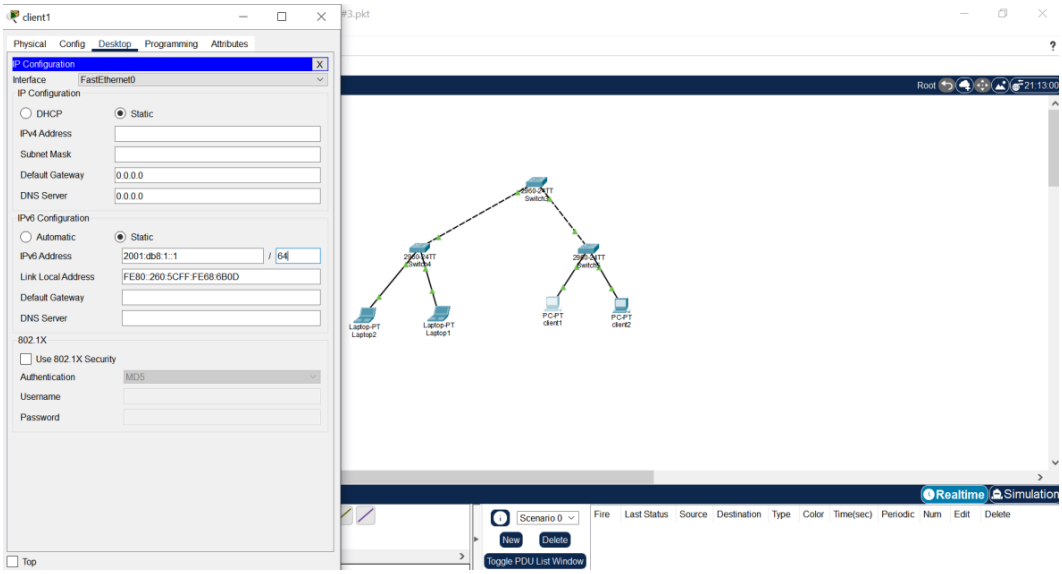

Capture 29.2 — Configuration ou vérification dans Cisco Packet Tracer

Tâche 6 — Topologie IPv6 au choix

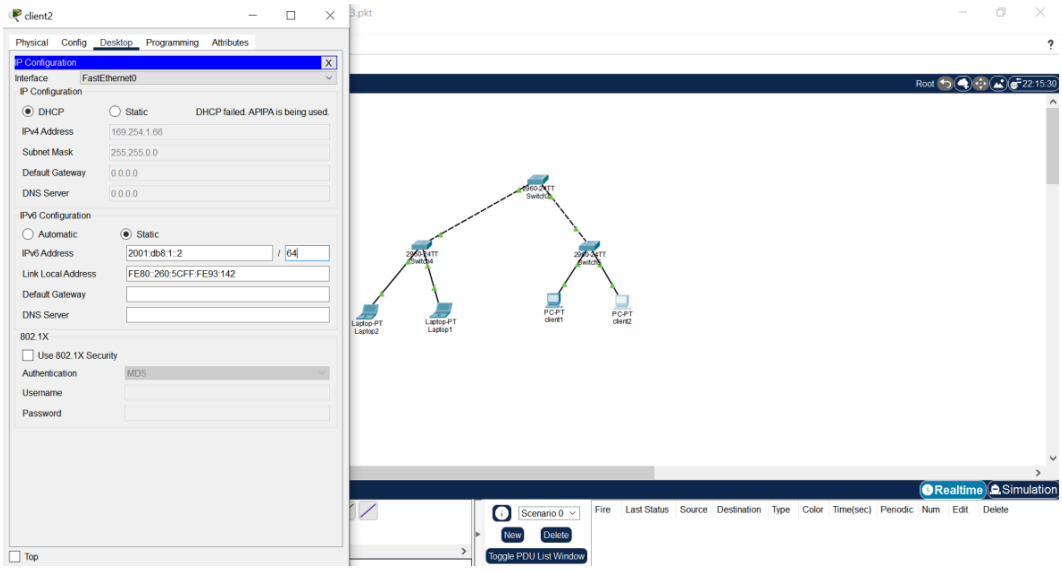

Choix d'une topologie parmi celles proposées, configuration des adresses IPv6 et tests de communication entre les équipements.

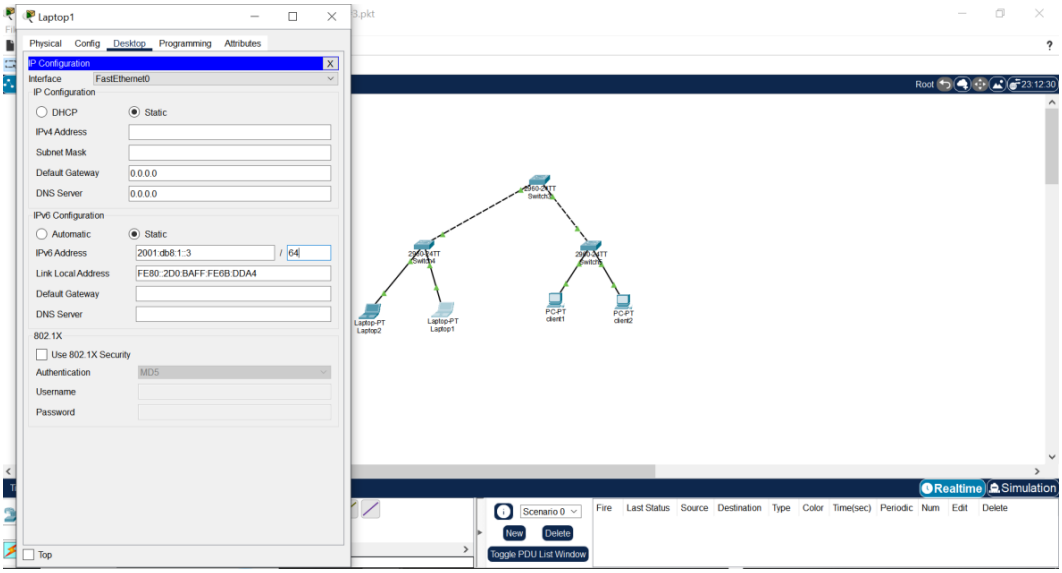

Capture 30.1 — Configuration ou vérification dans Cisco Packet Tracer

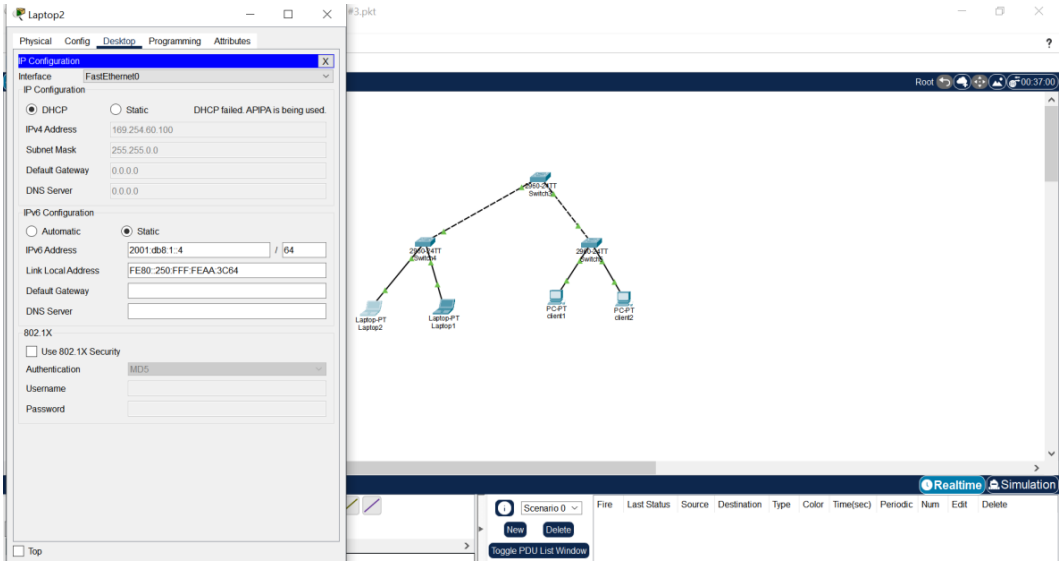

Capture 30.2 — Configuration ou vérification dans Cisco Packet Tracer

Capture 31.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 31.2 — Configuration ou vérification dans Cisco Packet Tracer

Capture 32.1 — Configuration ou vérification dans Cisco Packet Tracer

Capture 33.1 — Configuration ou vérification dans Cisco Packet Tracer

Conclusion générale

Ce troisième travail dirigé a permis de mettre en pratique les notions d'adressage IPv4 et IPv6 dans Cisco Packet Tracer. Les différentes activités ont porté sur la construction de topologies, la configuration des adresses IP et la vérification des communications à l'aide de la commande ping. Ces exercices contribuent à renforcer les compétences nécessaires à la mise en place et au diagnostic de réseaux informatiques.
